

MA 330 ESSAY # 7

You may have noticed that, throughout history, not all groups of people have been able to participate equally in the development of mathematics. Certain people whose names we know today had to struggle a great deal, while others were simply excluded altogether. What echoes of these excluded mathematicians do we still see today? How did their mistreatment affect their legacy, and the development of mathematics? You may draw on any material throughout the semester, but you must discuss at least one of Lovelace, Landau, Hausdorff, Noether, or Turing. (If you're interested in discussing another mathematician, that's fine, but please run it by me first.) Be sure to provide evidence in support of your conclusions.

Your essay should be typed, double spaced, 12 pt Times New Roman font, at least 750 words.
