Symmetry in Nature (and Human Nature) Stillness in Motion

Carl Lee University of Kentucky

Symmetry — 2015

An object is *symmetrical* if it "remains unchanged," or maps precisely back onto itself, or is *invariant* when acted on by an (interesting) *motion* or *transformation*.

Math (Distance)

Motion: Rotation of segment AB about a point.

The coordinates of the endpoints change, but the distance formula yields the same length of the line segments:

$$\sqrt{(4-1)^2+(2-1)^2}=\sqrt{(2-3)^2+(6-3)^2}=\sqrt{10}.$$

Physics (Special Relativity)

Motion: Lorentz transformation of space-time coordinates (x, y, z, t)

Unchanged: Space-time distance
$$\sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2 + (z_2 - z_1)^2 - (ct_2 - ct_1)^2}$$

Physics (Particles, Forces, and Laws)

Symmetry: A 'Key to Natures Secrets', by Steven Weinberg
http://www.nybooks.com/articles/archives/2011/oct/27/
symmetry-key-natures-secrets

"At the same time, we did have a valuable key to nature's secrets. The laws of nature evidently obeyed certain principles of symmetry, whose consequences we could work out and compare with observation, even without a detailed theory of particles and forces. There were symmetries that dictated that certain distinct processes all go at the same rate, and that also dictated the existence of families of distinct particles that all have the same mass. Once we observed such equalities of rates or of masses, we could infer the existence of a symmetry, and this we thought would give us a clearer idea of the further observations that should be made, and of the sort of underlying theories that might or might not be possible. It was like having a spy in the enemy's high command."

We can *create* a symmetrical object by *repeatedly applying* a certain transformation or set of transformations

Unlike before when we start with an object and describe the symmetries, this time we start with the symmetries and create the object

Music (Hayden)

Description by Scott Kim: Palindromic 3rd movement from Haydn's Symphony 47. The orchestra plays the first part twice forwards, twice backwards, the second part twice forwards, twice backwards, and finally the first part twice forwards, twice backwards.
