

MA 330 ASSIGNMENT # 6

Solutions to problems may be handwritten.

Problem 1: Using base 60 calculations (long division is suggested), verify the five sexagesimal expansions of fractions that precede Example 4.2 in *Crest*.

Short Essay: Write a reflection on the assignments so far in the course. You might consider some of the following questions as prompts to start your reflection (though you aren't required to answer all of these). Which problems were easiest for you? Which were hardest? Why? What did you learn as a result of doing these problems, mathematically or personally? Which problems were the most interesting to you? Are there any aspects of the problems so far that you feel you really don't "get"? Why?

Your essay should be typed, 2-2.5 pages long, double spaced, 12 point Times New Roman font. This essay will be graded using the grading rubric for writing found on the course website.
