## Rules of Reasoning

A tautology is a sentence which is true no matter what the truth value of its constituent parts.

MA 341 001

3

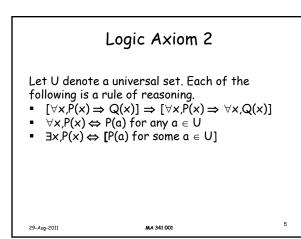

Example:

$$P \Rightarrow (P \lor Q)$$

29-Aug-2011

#### Logic Axiom 1 Every tautology is a rule of reasoning. • $(P\Rightarrow Q) \Leftrightarrow (\sim Q\Rightarrow \sim P)$ (The Contrapositive) • $[P \land (P \Rightarrow Q)] \Rightarrow Q$ (Modus ponens)

- ★  $[(P \Rightarrow Q) \land (Q \Rightarrow R)] \Rightarrow (P \Rightarrow R)$ (Law of Syllogism)
- ~(P⇒Q) ⇔ (P∧~Q) (basis for Proof by Contradiction)
- ←  $[(P \Rightarrow R) \land (Q \Rightarrow R)] \Rightarrow [(P \lor Q) \Rightarrow R]$ Proof by Cases

## Logic Axiom 3

(Rule of Substitution) Suppose  $\mathsf{P}\Leftrightarrow\mathsf{Q}.$  Then  $\mathsf{P}$  and  $\mathsf{Q}$  may be substituted for one another in any sentence.

## Logic Axiom 4

Every sentence of the type  $\sim [\forall x, P(x)] \Leftrightarrow [\exists x \text{ so that } \sim P(x)]$  is true.

#### Logic Axiom 5

Every sentence of the type  $\sim[\exists x \text{ so that } P(x)] \Leftrightarrow [\forall x, \sim P(x)]$  is true.

MA 341 001

29-Aug-2011

## Mathematical System

#### Consists of

- 1. Set of undefined concepts,
- 2. Universal set
- 3. Set of relations
- 4. Set of operations
- 5. Set of logical axioms
- 6. Set of axioms
- 7. Set of theorems
- 8. Set of definitions
- 9. An underlying set theory

29-Aug-2011

MA 341 001

#### Proof Suppose $A_1, A_2, \dots, A_k$ are all the axioms and previously proved theorems of a mathematical system. A formal proof, or deduction, of a sentence P is a sequence of statements $S_1$ , S<sub>2</sub>,...,S<sub>n</sub>, where 1. $S_n$ is P and

- 2. One of the following holds
- a) S<sub>i</sub> is one of A<sub>1</sub>, A<sub>2</sub>,...,A<sub>k</sub>
  b) S<sub>i</sub> follows from the previous statements by valid argument

29-Aug-2011

MA 341 001

## Proving Conditionals

Suppose  $A_1, A_2, \dots, A_k$  are all the axioms and previously proved theorems of a mathematical system. A formal proof, or deduction, of a sentence P is a sequence of statements  $S_{1}$ ,  $S_2, \dots, S_n$ , where

- 1. S<sub>n</sub> is P and
- 2. One of the following holds

a)  $S_i$  is one of  $A_1, A_2, \dots, A_k$ 

b) S follows from the previous statements by valid argument

MA 341 001

29-Aug-2011

## Proof of $\textbf{P} \Rightarrow \textbf{Q}$

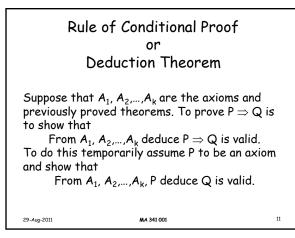

- 1. Assume P to be true.
- 2. Use P and all other theorems and axioms to deduce Q.
- 3. Once Q is deduced in this manner you have completed a proof of  $\mathsf{P}\Rightarrow\mathsf{Q}.$

You have not shown that Q is true.

You have shown only that Q is true IF P is true

29-Aug-2011

MA 341 001

## Proof by Contrapositive

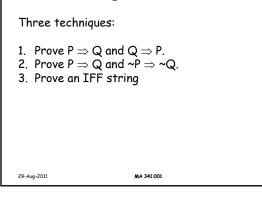

MA 341 001

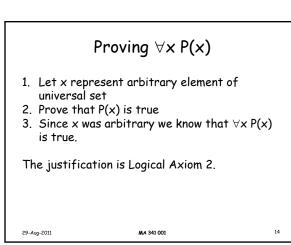

We can prove  $P \Rightarrow Q$  by proving  $\sim Q \Rightarrow \sim P$ .

Rule of conditional proof used to prove the contrapositive

29-Aug-2011

# Proof by Cases

Proving a statement of the form: (P  $\vee$  Q)  $\Rightarrow$  R

29-Aug-2011

Use the tautology:  

$$[P \Rightarrow R] \land [Q \Rightarrow R] \Leftrightarrow [(P \lor Q) \Rightarrow R]$$

MA 341 001

15

## Mathematical Induction

Let P(n) be a statement for any integer n. Principle of Induction:  $[P(1) \land (\forall k, P(k) \Rightarrow P(k+1))] \Rightarrow \forall n, P(n)$ 

```
2 step process: 
Basic Step: Prove P(1). 
Inductive step: Prove \forall k, P(k) \Rightarrow P(k+1)
```

29-Aug-2011

**Proof by Contradiction** 

MA 341 001

Tautology:  $[\ensuremath{\sim} P \Rightarrow (R \land \ensuremath{\sim} R)] \Rightarrow P$ 

Usually used to prove statement of type P  $\Rightarrow$  Q. Deduction Theorem: Assume P and deduce P  $\Rightarrow$  Q Contrapositive: Assume ~Q and deduce ~Q  $\Rightarrow$  ~P

Contradiction: Assume P AND ~Q and deduce R  $\wedge$  ~R

MA 341 001

29-Aug-2011

## Proving $\exists x P(x)$

Prove that there is at least one x so that P(x) is true. Here is one case where an example is good enough.

MA 341 001

The other case is when you find a "counterexample" to show  $\sim(\forall x P(x))$ .

29-Aug-2011

16

#### How to Create a Proof

Suggestions - NOT RULES

- 1. Translate to symbolic logic
- 2. Analogy look at other proofs
- 3. Reverse engineering you know where you want to end, figure out each step it would require to get there (analogy - trig identities)
- 4. Use definitions
- 5. Use previously proved theorems

29-Aug-2011

MA 341 001

#### Euclid's Five Axioms

Let the following be postulated

- 1. To draw a straight line from any point to any point. 2. To produce a finite straight line continuously in a straight line.
- To describe a circle with any center and distance.
   That all right angles are equal to one another.
- 5. That, if a straight line falling on two straight lines make the interior angles on the same side less than two right angles, the two straight lines, if produced indefinitely, meet on that side on which are the angles less than two right angles. (Euclid's Parallel Postulate)

MA 341 001

## Hilbert's Axioms

Incidence Axioms

I-1: For every point P and for every point Q not equal to P there exists a unique line that passes through P and Q. I-2: For every line there exist at least two distinct points incident with it. I-3: There exist three distinct points with the property that no line is incident with all three of them.

29-Aug-2011

MA 341 001

19

#### Hilbert's Axioms

Betweenness Axioms

B-1: If  $A^*B^*C$ , then A, B, and C are 3 distinct points all lying on the same line and  $C^*B^*A$ . B-2: Given any two distinct points B and D, there exists

points A, C, and E lying on BD such that  $A^*B^*D$ ,  $B^*C^*D$ , and  $B^*D^*E$ .

B-3: If A, B, and C are three distinct point lying on the same line, then one and only one of the points is between the other two.

29-Aug-2011

MA 341 001

22

23

#### Hilbert's Axioms

#### Betweenness Axioms

B-4: (Plane Separation Axiom) For every line I and for any 3 points A, B, and C not lying on I:

- i. If A and B are on the same side of I and B and C are on the same side of I, then A and C are on the same side of I.
- ii. If A and B are on opposite sides of I and B and C are on opposite sides of I, then A and C are on the same side of I.

MA 341 001

29-Aug-2011

#### Hilbert's Axioms

Congruence Axioms

C-1: If A and B are distinct points and if A' is any point, then for each ray r emanating from A' there is a unique point B' on r such that  $B' \neq A'$  and  $AB \cong A'B'$ . C-2: If  $AB \cong CD$  and  $AB \cong EF$ , then  $CD \cong EF$ . Also, every segment is congruent to itself. C-3: If  $A^*B^*C$  and  $A^*B^*C'$  and  $AB \cong A'B'$  and  $BC \cong B'C'$ , then  $AC \cong A'C'$ .

C-4: Given any  $\angle$ BAC and given a ray A'B' emanating from point A',  $\exists$ ! ray A'C' on a given side of line A'B' so that  $\angle$ BAC  $\cong \angle$ B'A'C'.

MA 341 001

29-Aug-2011

#### Hilbert's Axioms

Congruence Axioms

C-5: If  $\angle A \cong \angle B$  and  $\angle B \cong \angle C$  then  $\angle A \cong \angle C$ . Also, every angle is congruent to itself.

C-6: (Side-Angle-Side) If two sides and the included angle of one triangle are congruent respectively to two sides and the included angle of another triangle, then the two triangles are congruent.

29-Aug-2011

MA 341 001

25

26

## Hilbert's Axioms

Continuity Axioms

Archimedes Axiom: If AB and CD are any segments, then there is a number n such that if segment CD is laid off n times on the ray AB emanating from A, then a point E is reached where n CD  $\cong$  AE and B is between A and E.

Dedekind's Axiom: Suppose that the set of all points on a line I is the union  $\Sigma_1 \cup \Sigma_2$  of two nonempty subsets such that no point of  $\Sigma_1$  is between two points of  $\Sigma_2$  and vice versa. Then there is a unique point, O, lying on I such that  $P_1^*O^*P_2$  if and only if  $P_1 \in \Sigma_1$  and  $P_2 \in \Sigma_2$  and  $O \neq P_1, P_2$ .

29-Aug-2011

MA 341 001

#### Hilbert's Axioms

Continuity Axioms

Elementary Continuity Principle: If one endpoint of a segment is inside a circle and the other outside, then the segment intersects the circle.

Circular Continuity Principle: If a circle has one point inside and one point outside another circle, then the two circles intersect in two points.

29-Aug-2011

MA 341 001

## Birkhoff's Axioms

B1. There exist nonempty subsets of the plane called lines, with the property that each two points belong to exactly one line.

B2. Corresponding to any two points A and B in the plane there exists a unique real number d(AB) = d(BA), the distance from A to B, which is O if and only if A = B.

29-Aug-2011

MA 341 001

28

29

30

## Birkhoff's Axioms

B3. (Birkhoff Ruler Axiom) If k is a line and **R** denotes the set of real numbers, there exists a one-to-one correspondence (X->x) between the points X in k and the numbers x in **R** such that d(A,B) = |a-b| where A->a and B->b.

B4. For each line k there are exactly two nonempty convex sets R' and R" satisfying a) R'  $\cup$  k  $\cup$  R" is the entire plane, b) R'  $\cap$  R" = Ø, R'  $\cap$  k = Ø, and R''  $\cap$  k = Ø c) If X in R' and Y in R" then XY  $\cap$  k  $\neq$  Ø

MA 341 001

29-Aug-2011

## Birkhoff's Axioms

B5. For each angle  $\angle ABC$  there exists a unique real number x with  $0 \le x \le 180$  which is the (degree) measure of the angle  $x = \angle ABC^{\circ}$ .

MA 341 001

B6. If ray BD lies in ∠ABC, then ∠ABD° + ∠DBC° = ∠ABC°.

29-Aug-2011

## Birkhoff's Axioms

B7. If  $\overrightarrow{AB}$  is a ray in the edge, k, of an open half plane H(k;P) then there exist a one-toone correspondence between the open rays in H(k;P) emanating from A and the set of real numbers between 0 and 180 so that if  $\overrightarrow{AX} \rightarrow x$  then  $\angle BAX^{\circ} = x$ .

Birkhoff's Axioms

MA 341 001

B8. (SAS) If a correspondence of two triangles, or a triangle with itself, is such that two sides and the angle between them are respectively congruent to the corresponding two sides and the angle between them, the correspondence is a congruence of triangles.
