

Circles, Arcs and Angles

MA 341 - Topics in Geometry
Lecture 09

Star Trek Lemma

- A, B, C are points on a circle centered at O .
- Angle $\angle BAC$ an *inscribed angle*
- Angular measure of arc BC is the measure of the central angle $\angle BOC$, where the angle is measured on the same side of O as the arc.
- $\angle BAC$ subtends the arc BC .

14-Sept-2011 MA 341 001 2

Star Trek Lemma

The measure of the inscribed angle is half of the angular measure of the arc it subtends.

There are several cases to the proof of the lemma. We will look only at the case where $\angle BAC$ is an acute angle and the center, O , lies in the interior of the angle, as in our figure.

14-Sept-2011 MA 341 001 3

Star Trek Lemma

The measure of the inscribed angle is half of the angular measure of the arc it subtends.

4

Star Trek Lemma

Note that OA , OB and OC are all radii

Thus, $\triangle AOB$, $\triangle AOC$ and $\triangle BOC$ are isosceles

MA 341 001

5

Star Trek Lemma

Extend the segment OA until it meets the circle at a point D .

$\triangle AOB$ isosceles $\Rightarrow \angle BAO = \angle OBA$

$\angle BOD = \angle OBA + \angle BAO = 2\angle BAO$

14-Sept-2011

MA 341 001

6

Star Trek Lemma

$\angle BOD = \angle OBA + \angle BAO = 2\angle BAO$

ΔAOC isosceles $\Rightarrow \angle CAO = \angle OCA$
 $\angle COD = \angle OCA + \angle CAO = 2\angle CAO$

14-Sept-2011 MA 341 001 7

Star Trek Lemma

$\angle BOD = \angle OBA + \angle BAO = 2\angle BAO$
 $\angle COD = \angle OCA + \angle CAO = 2\angle CAO$
 $\angle BOC = \angle BOD + \angle DOC$
 $\quad = 2\angle BAO + 2\angle CAO$
 $\quad = 2\angle BAC$

Why the Star Trek Lemma?

14-Sept-2011 9

Circle Theorem

There is exactly one circle through any three non-collinear points.

14-Sept-2011 MA 341 001 10

Circle Theorem

Let a be the perpendicular bisector of AC and b the perpendicular bisector of AB .
Why do they intersect?
Let the intersection be P .

14-Sept-2011 MA 341 001 11

Circle Theorem

Construct PA, PB, PC
 $\triangle PBX \cong \triangle PAX$ - why? $\Rightarrow PB \cong PA$
 $\triangle PAY \cong \triangle PCY$ - why? $\Rightarrow PA \cong PC$
 $\Rightarrow PA \cong PB \cong PC$
 A, B, C equidistant from P . Text shows other direction

Inscribed Parallelograms

A polygon is inscribed in a circle if all of its vertices lie on the circle and its interior is interior to the circle.

Theorem: Opposite angles of an inscribed quadrilateral are supplementary.

14-Sept-2011 MA 341 001 14

Inscribed Parallelograms

Theorem: Opposite angles of an inscribed quadrilateral are supplementary.

14-Sept-2011 MA 341 001 15

Inscribed Parallelograms

$\angle ABC = \frac{1}{2}\angle AOC$
 $\angle ADC = \frac{1}{2}\angle AOC'$

$\angle ABC + \angle ADC = \frac{1}{2}\angle AOC + \frac{1}{2}\angle AOC'$
 $\angle ABC + \angle ADC = \frac{1}{2}(360^\circ) = 180^\circ$

14-Sept-2011 MA 341 001 16

Secants and Angles

Theorem: The angle between two secants drawn to a circle from an exterior point is equal to half the difference of the two subtended arcs.

14-Sept-2011 MA 341 001 17

Secants and Angles

$\angle AXB = 180 - \angle XAC - \angle XCA$
 $\angle AXB = 180 - \angle XAC - (180 - \angle ACB) = \angle ACB - \angle XAC$

14-Sept-2011 MA 341 001 18

Secants and Angles

$\angle AXB = 180 - \angle XAC - \angle XCA$
 $\angle AXB = 180 - \angle XAC - (180 - \angle ACB) = \angle ACB - \angle DAC$
 $\angle AXB = \frac{1}{2} \angle AOB - \frac{1}{2} \angle DOA$
 $\angle AXB = \frac{1}{2} (\widehat{AB} - \widehat{CD})$

14-Sept-2011 MA 341 001 19

Chords and Angles

Theorem: The angle between two chords is equal to half the sum of the two subtended arcs.

$\angle AXB = \frac{1}{2} (\widehat{AB} + \widehat{CD})$

14-Sept-2011 MA 341 001 20

Circles and Right Angles

Theorem: Given $\triangle ABC$ the angle at vertex C is a right angle if and only if AB is a diameter of a circle.

14-Sept-2011 MA 341 001 21

Circles and Right Angles

The circumcircle for $\triangle ABC$ exists. Thus, $\angle ACB$ is inscribed in the circle and the arc AB is measured by $2\angle C$.

$\angle C = 90^\circ \Leftrightarrow 2\angle C = 180^\circ$
 $\Leftrightarrow AB$ is a diameter.

14-Sept-2011

MA 341 001

22

Tangents and Chords

Theorem: The angle between a chord and a tangent at one of its endpoints is equal to half the subtended arc.

14-Sept-2011

MA 341 001

23

Tangents and Secants

Theorem: The angle between a secant and a tangent at a point outside the circle is equal to half the difference of the two subtended arcs.
