Examples: In what sets do the following numbers belong?

- **1** 7  $\mathbb{N}, \mathbb{W}, \mathbb{Z}, \mathbb{Q}, \mathbb{R}$
- $2 \pi$   $\mathbb{H},\mathbb{R}$

# Definition

The *absolute value* of n, denoted |n|, is the distance of n from 0 on the number line.

◆□ > ◆□ > ◆三 > ◆三 > ・三 ・ のへで

7/31

- 15
- 2 |-3|
- || || 4||

# Definition

The *absolute value* of n, denoted |n|, is the distance of n from 0 on the number line.

◆□ > ◆□ > ◆三 > ◆三 > ・三 ・ のへで

8/31

- **1** |5| = 5
- **2** |-3| = 3
- **3** -|-4| = -4

$$3^4 = 3 \cdot 3 \cdot 3 \cdot 3 = 81$$

◆□ > ◆□ > ◆三 > ◆三 > ・三 ・ のへで

9/31

3 is called the base and 4 is called the exponent.

- 2<sup>3</sup>
- $(-1)^5$
- Solution 3<sup>2</sup> −3<sup>2</sup>

$$3^4 = 3 \cdot 3 \cdot 3 \cdot 3 = 81$$

3 is called the <u>base</u> and 4 is called the exponent.

# Section 2

# Evaluating Expressions

<ロ > < 部 > < 言 > く 言 > こ > う < ご 11 / 31

# $\begin{array}{c} \mathsf{PEMDAS} \\ \underline{\mathsf{P}}\mathsf{lease} \ \underline{\mathsf{E}}\mathsf{xcuse} \ \underline{\mathsf{M}}\mathsf{y} \ \underline{\mathsf{D}}\mathsf{ear} \ \underline{\mathsf{A}}\mathsf{unt} \ \underline{\mathsf{S}}\mathsf{ally} \end{array}$

Parenthesis and Exponents Multiplication and Division Addition and Subtraction

# **Examples:** Evaluate the following expressions using the Order of Operations.

**1** 
$$5+2\cdot 3$$

2  $8 + 36 \div 4(12 - 3^2)$ 

Examples: Evaluate the following expressions using the Order of Operations.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ ののの

14/31

 $5 + 2 \cdot 3$ =5+6 =11  $8 + 36 \div 4(12 - 3^{2})$ =8 + 36 ÷ 4(12 - 9) = 8 + 36 ÷ 4(3) = 8 + 9(3) = 8 + 27 = 35

#### Evaluating a Mathematical Expression

- Replace each variable with open parentheses ().
- Substitute the given values for each variable.
- Simplify using the order of operations.

**Example:** Evaluate the expression  $x^3 - 2x^2 + 5$  for x = -3.

イロト イポト イヨト イヨト

#### Evaluating a Mathematical Expression

- Replace each variable with open parentheses ().
- Substitute the given values for each variable.
- Simplify using the order of operations.

## Example: Evaluate the expression $x^3 - 2x^2 + 5$ for x = -3. $(-3)^3 - 2(-3)^2 + 5$ -27 - 2(9) + 5 -27 - 18 + 5-40

# Section 3

# Properties of Real Numbers

<ロト < 部 > < 言 > < 言 > 言 の < C 17/31

# The Commutative Properties

Given that a and b represent real numbers:

$$a+b=b+a$$
  
 $a\cdot b=b\cdot a$ 

Terms can be added/multiplied in any order without changing the sum/product.

## The Associative Properties

Given that a, b, and c represent real numbers:

$$(a+b)+c = a+(b+c)$$
$$(a \cdot b) \cdot c = a \cdot (b \cdot c)$$

Terms can be regrouped.

## The Additive and Multiplicative Identities

Given that x is a real number:

$$x + 0 = x$$
$$1 \cdot x = x$$

イロン イヨン イヨン イヨン

3

20/31

Zero is the identity for addition. One is the identity for multiplication.

#### The Additive and Multiplicative Inverses

Given that p, q, and x represent real numbers  $(p, q \neq 0)$ :

$$\begin{array}{c} x + (-x) = 0\\ \frac{p}{q} \cdot \frac{q}{p} = 1 \end{array}$$

x and -x are additive inverses.

 $\frac{p}{q}$  and  $\frac{q}{p}$  are multiplicative inverses.

# The Distributive Property of Multiplication over Addition

Given that a, b, and c represent real numbers :

$$a(b+c) = ab + ac$$
  
 $ab + ac = a(b+c)$ 

To simplify expressions, we will combine like terms using the Properties of Real Numbers.

#### To Simplify an Expression

- Eliminate parentheses by applying the distributive property.
- ② Use the commutative and associative properties to group like terms.
- O Use the distributive property to combine like terms.

**Example:** Simplify the expression completely:  $7(2p^2 + 1) - (p^2 + 3)$ .

#### To Simplify an Expression

- Eliminate parentheses by applying the distributive property.
- ② Use the commutative and associative properties to group like terms.
- Use the distributive property to combine like terms.

**Example:** Simplify the expression completely:  $7(2p^2 + 1) - (p^2 + 3)$ .

$$7(2p^{2} + 1) - (p^{2} + 3) = 14p^{2} + 7 - 1p^{2} - 3$$
  
=  $(14p^{2} - 1p^{2}) + (7 - 3)$   
=  $(14 - 1)p^{2} + 4$   
=  $13p^{2} + 4$
