## MA 111, Topic 1: Voting Theory

Our first topic in this course is called Voting Theory. In this chapter we will discuss several different ways to determine who wins an election based on how people vote. We will also discuss several different ideas of fairness for each of these voting methods.

## The Language of Voting

The votes of each election that we discuss will come in the form of ballots. It is often convenient to combine many ballots into a preference schedule to make it easier to put a lot of information into a small space.

Definition 1 (Ballot). A ballot is a ranked list of all the options (candidates) a person can vote for in an election.

Example 2. Suppose Steve is voting in an election for class president. The students running for president are Albert, Brenda, Chris, and Dave. Steve's ballot looks like

|  | Ballot |
| :---: | :---: |
| 1st | Brenda |
| 2nd | Dave |
| 3rd | Chris |
| 4th | Albert |

This means that Steve thinks Brenda is the best choice, Dave is the second-best choice, Chris is the third-best choice, and Albert is the worst choice for president.

It is often convenient to combine many ballots into a preference schedule to make it easier to put a lot of information into a small space.

Definition 3 (Preference Schedule). A preference schedule is a table which lists the results of many ballots cast for the same election in compact form.

Example 4. Each student in Steve's grade votes for class president. The results are summarized in the following preference schedule.

| Votes | 7 | 4 | 2 |
| :---: | :---: | :---: | :---: |
| 1st | A | B | C |
| 2nd | B | D | D |
| 3rd | C | C | B |
| 4th | D | A | A |

The numbers in the top row represent the number of people that voted in the order of that column. That is, the 7 above means that 7 students ranked the options for class president in the order: Albert, Brenda, Chris, Dave. Also, 4 students ranked the candidates in the order: Brenda, Dave, Chris, Albert. Finally, 2 students ranked the candidates in the order: Chris, Dave, Brenda, Albert.

Example 5 (Where do we eat?). Four friends are trying to decide where they should eat. They RANK their preferences with the following results:

| Ballot |  |
| ---: | :--- |
| 1st | Burgers |
| 2nd | Pizza |
| 3rd | Mexican |

|  | Ballot |
| ---: | :--- |
| 1st | Burgers |
| 2nd | Pizza |
| 3rd | Mexican |

|  | Ballot |
| ---: | :--- |
| 1st | Pizza |
| 2nd | Mexican |
| 3rd | Burgers |

|  | Ballot |
| ---: | :--- |
| 1st | Mexican |
| 2nd | Pizza |
| 3rd | Burgers |

- Given the above preferences, where should they eat?
- Give a reason that supports a different restaurant choice than the one you gave above.

## Voting Method: Plurality

Definition 6 (The Plurality Method of Voting). For each ballot, only the first place vote counted. The "candidate" with the most first place votes is the winner. If ballots are combined into a preference schedule then the Plurality method will ignore all non-1st place votes.

We could also determine who gets 2nd place, 3rd place, etc...ranking the candidates based on their 1st-place votes (However, our main focus is usually only determining which candidate wins 1st place.)

Definition 7. A candidate in an election is a Majority Candidate if they receive over $50 \%$ of 1st-place votes.

Example 8 (Best Bad Movie 1). Stuart Wellington of the Flophouse podcast asks two of his friends to rate the best bad movie. The candidates are Castle Freak (CF), Invisible Maniac (IM) and Head of the Family (HF). He and his friends give the following preferences:

- Which movie will win if the Plurality method is used?
- Which movie do you think should win?

Example 9 (What to eat? Version 1). (From In Defense of Food by Michael Pollan) A group of Americans were asked the following:
"Assume you are alone on a desert island for one year and can have water and one other food. Pick the food you think would be best for your health.

The choices are Alfalfa sprouts, Bananas, Corn, Hot Dogs, Milk Chocolate, Peaches, or Spinach."

$$
\begin{array}{cccccccc}
\text { \% Votes } & 7 & 42 & 12 & 4 & 3 & 5 & 27 \\
\hline \text { 1st Place } & \mathbf{A} & \mathbf{B} & \mathbf{C} & \mathbf{H} & \mathbf{M} & \mathbf{P} & \mathbf{S}
\end{array}
$$

- Which food wins if the Plurality method is used?
- Which food do you think would be best for your health?

Example 10 (What to eat? Version 2). (From In Defense of Food by Michael Pollen)
"Assume you are alone on a desert island for one year and can have water and one other food. Pick the food you think would be best for your health. The choices are Alfalfa sprouts, Bananas, Corn, Hot Dogs, Milk Chocolate, Peaches, or Spinach."

| $\%$ Votes | 7 | 42 | 12 | 4 | 3 | 5 | 27 |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | $\mathbf{A}$ | $\mathbf{B}$ | $\mathbf{C}$ | $\mathbf{H}$ | $\mathbf{M}$ | $\mathbf{P}$ | $\mathbf{S}$ |
| 2nd Place | $\mathbf{S}$ | $\mathbf{C}$ | $\mathbf{S}$ | $\mathbf{C}$ | $\mathbf{C}$ | $\mathbf{S}$ | $\mathbf{P}$ |

- If people are told to include 2nd place choices as well, what ONE food do you think should be chosen?
- If people are told to include 2nd place choices as well, what TWO foods do you think should be chosen?

Example 11 (2013 NCAA Football 1). 37 Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Their predictions for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) are given below:

| Number of Votes | 14 | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | LV | LV |
| 3rd Place | OR | LV | AL | OR | AL |
| 4th Place | LV | OSU | OSU | OSU | OSU |

- Which school wins if the Plurality method is used to select the winner?
- Give a reason that supports a different team choice than the answer above.

Voting Method: Borda Count
Definition 12 (Method: Borda Count). Each voter gives a complete ranking of the candidates. If there are $N$ candidates, then each $1^{s t}$ place vote a candidate receives is worth $N$ points. Each $2^{\text {nd }}$ place vote a candidate receives is worth $N-1$ points. Each $3^{r d}$ place vote a candidate receives is worth $N-2$ points, and so on. Each last place vote is worth 1 point. The candidate with the most number of points wins the election.

We could also determine who gets 2nd place, 3rd place, etc... using the points of each candidate. (Again, our main focus is usually only determining which candidate wins 1st place.)

Example 13 (2013 NCAA Football 2). 37 Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Their predictions for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) are given below:

| Number of Votes | 14 | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | LV | $\mathbf{L V}$ |
| 3rd Place | OR | $\mathbf{L V}$ | $\mathbf{A L}$ | OR | AL |
| 4th Place | $\mathbf{L V}$ | OSU | OSU | OSU | OSU |

- Which school wins if the Borda method is used to select the winner?
- Does the Borda method always produce the same winner as the Plurality method?

Example 14 (2013 NCAA Football 3). A certain number of Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Their predictions for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) are given below:

| Number of Votes | $?$ | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | LV | LV |
| 3rd Place | OR | LV | AL | OR | AL |
| 4th Place | LV | OSU | OSU | OSU | OSU |

- How many votes are needed for OSU to be the Majority winner?
- If OSU is the Majority winner, will OSU win using the Borda method?

Example 15 (Lexington One Direction Fan Club 1). There are four choices for cutest band member (because no one likes Louis): Harry, Liam, Niall, and Zayn. Here's how the 40 person club votes:

| Votes | 6 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- Which member will win "Cutest" if the Plurality method is used?
- How many points does Harry get if the Borda method is used?
- How many points does Niall get if the Borda method is used?

Example 16 (2012 Best Picture 1). 15 Academy Voters get together to compare their preferences for the 2012 Best Picture. The films under consideration are Argo, Life of Pi, and Zero Dark Thirty. Preference for the voters are summarized below

| Votes | 6 | 5 | 4 |
| :---: | :---: | :---: | :---: |
| 1st place | $\mathbf{A}$ | $\mathbf{Z}$ | $\mathbf{L}$ |
| 2nd place | $\mathbf{L}$ | $\mathbf{L}$ | $\mathbf{Z}$ |
| 3rd place | $\mathbf{Z}$ | $\mathbf{A}$ | $\mathbf{A}$ |

- Which movie will win best picture if the Plurality method is used?

What about if the Borda method is used?

- If the least favorite movie is removed from consideration, with all ballots reorganized (and preferences moved to fill missing gaps), which movie will win if Plurality is used?

## Voting Method: Plurality with Elimination

Definition 17 (Method: Plurality with Elimination). Each voter casts a ballot for their favorite candidate. If one candidate receives a majority of first-place votes, then that candidate wins the election. If no candidate receives a majority of votes, then the candidate (or candidates) with the least number of votes is (are) eliminated, and a new election is held (with votes shifted from before). This continues until a single candidate receives a majority of 1st-place votes, and wins the election.

Determining who gets 2nd place, 3rd place, etc. . . is more open using this method. We could make first elimination correspond to last place, 2nd elimination goes with 2nd to last place, etc ..., but there are other ways as well. (Again, our main focus is usually only determining which candidate wins 1st place.)

Example 18 (2013 NCAA Football 4). 37 Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Their predictions for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) are given below:

| Number of Votes | 14 | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | LV | LV |
| 3rd Place | OR | LV | AL | OR | AL |
| 4th Place | LV | OSU | OSU | OSU | OSU |

- Using Plurality with Elimination, which team is eliminated first?
- Using Plurality with Elimination, which team is eliminated second?
- Which team wins using Plurality with Elimination?

Example 19 (Lexington One Direction Fan Club 2). There are four choices for cutest band member (because no one likes Louis): Harry, Liam, Niall, and Zayn. Here's how the 40 person club votes:

| Votes | 6 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- Using Plurality with Elimination, which member is eliminated first?
- Second?
- Which member wins using Plurality with Elimination?

Example 20 (2012 Best Picture 2). 15 Academy Voters get together to compare their preferences for the 2012 Best Picture. The films under
consideration are Argo, Life of Pi, and Zero Dark Thirty. Preference for the voters are summarized below

| Votes | 6 | 5 | 4 |
| :---: | :---: | :---: | :---: |
| 1st place | $\mathbf{A}$ | $\mathbf{Z}$ | $\mathbf{L}$ |
| 2nd place | $\mathbf{L}$ | $\mathbf{L}$ | $\mathbf{Z}$ |
| 3rd place | $\mathbf{Z}$ | $\mathbf{A}$ | $\mathbf{A}$ |

- If $\mathbf{A}$ is no longer a choice, which movie will win if Plurality is used?
- If $\mathbf{L}$ is no longer a choice, which movie will win if Plurality is used?
- If $\mathbf{Z}$ is no longer a choice, which movie will win if Plurality is used?

Example 21 (Lexington One Direction Fan Club 3.1). There are four choices for cutest band member (because no one likes Louis): Harry, Liam, Niall, and Zayn. Here's how the 40 person club votes:

| Votes | 6 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- If $\mathbf{L}$ and $\mathbf{Z}$ are no longer choices, who will win if Plurality is used?
- If $\mathbf{N}$ and $\mathbf{Z}$ are no longer choices, who will win if Plurality is used?

Example 22 (Lexington One Direction Fan Club 3.2). There are four choices for cutest band member (because no one likes Louis): Harry, Liam, Niall, and Zayn. Here's how the 40 person club votes:

| Votes | 6 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- If $\mathbf{H}$ and $\mathbf{L}$ are no longer choices, who will win if Plurality is used?
- If $\mathbf{H}$ and $\mathbf{Z}$ are no longer choices, who will win if Plurality is used?

Example 23 (Lexington One Direction Fan Club 3.3). There are four choices for cutest band member (because no one likes Louis): Harry, Liam, Niall, and Zayn. Here's how the 40 person club votes:

| Votes | 6 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- If $\mathbf{H}$ and $\mathbf{N}$ are no longer choices, who will win if Plurality is used?
- If $\mathbf{L}$ and $\mathbf{N}$ are no longer choices, who will win if Plurality is used?

## Voting Method: Pairwise Comparison

Definition 24 (Method: Pairwise Comparison). Each voter gives a complete ranking of the candidates. For each pair of candidates, the number of voters preferring each are compared. The candidate receiving more votes (just like in Plurality) receives one point. In case of a tie, each candidate receives one-half point. After all pairs of candidates are compared, the candidate with the most points wins the election.

It will often be very useful to make a Pairwise Comparison or Matchup Chart when using ideas related to Pairwise Comparison.
We could also determine who gets 2nd place, 3rd place, etc. . . using the points of each candidate. (Again, our main focus is usually only determining which candidate wins 1st place.)

Example 25 (2013 NCAA Football 5). 37 Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Their predictions for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) are given below:

| Number of Votes | 14 | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | LV | LV |
| 3rd Place | OR | LV | AL | OR | AL |
| 4th Place | LV | OSU | OSU | OSU | OSU |

- Which team wins if the Pairwise Comparison method is used?
- Is the winner under Pairwise Comparison the same as any other previous method?

Example 26 (2012 Best Picture 3). 15 Academy Voters get together to compare their preferences for the 2012 Best Picture. The films under consideration are Argo, Life of Pi, and Zero Dark Thirty. Preference for the voters are summarized below:

| Votes | 6 | 5 | 4 |
| :---: | :---: | :---: | :---: |
| 1st place | $\mathbf{A}$ | $\mathbf{Z}$ | $\mathbf{L}$ |
| 2nd place | $\mathbf{L}$ | $\mathbf{L}$ | $\mathbf{Z}$ |
| 3rd place | $\mathbf{Z}$ | $\mathbf{A}$ | $\mathbf{A}$ |

- What is the MAXIMUM number of points a movie could win if the Pairwise Comparison Method is used?
- How many TOTAL comparisons are made to determine the winner?

Example 27 (2013 NCAA Football 6). 37 Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Their predictions for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) are given below:

| Number of Votes | 14 | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | $\mathbf{L V}$ | $\mathbf{L V}$ |
| 3rd Place | OR | $\mathbf{L V}$ | AL | OR | AL |
| 4th Place | LV | OSU | OSU | OSU | OSU |

- What is the MAXIMUM number of points a team could win if the Pairwise Comparison Method is used?
- How many TOTAL comparisons are made to determine the winner?

Definition 28 (Pairwise Comparison Points). Consider a Pairwise Comparison Election with $n$ candidates:

- The most points a candidate can win is $n-1$ points.

An election can have at most one candidate that wins $n-1$ points under Pairwise Comparison. Such a candidate is called the Condorcet Candidate.

- The total number of points awarded during the Pairwise Comparison Election is given by the rule

$$
\frac{n(n-1)}{2}
$$

For $n=3$, there are $\frac{3(3-1)}{2}=3$ Total Points.
For $n=4$, there are $\frac{4(4-1)}{2}=6$ Total Points.
For $n=5$, there are $\frac{5(5-1)}{2}=10$ Total Points.
Example 29 (Lexington One Direction Fan Club 4). There are five choices for cutest band member: Harry, Liam, Louis, Niall, and Zayn. Suppose we know how the Pairwise Comparison points for everyone EXCEPT Zayn.

| Name | Harry | Liam | Louis | Niall | Zayn |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Points | 4 | 3 | 1 | 0 | $?$ |

- Do we know the winner if the method of Pairwise Comparison is used?
- Do we know how many points Zayn will get?

Example 30 (2013 NCAA Football 7). 37 Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Suppose we only know how the Pairwise Comparison points for their predictions for Alabama and Oregon.

| Name | Alabama | Louisville | Ohio State University | Oregon |
| :--- | :---: | :---: | :---: | :---: |
| Points | 2.5 | $?$ | $? ?$ | 2 |

- Is it possible for Louisville or Ohio State to win using Pairwise Comparison?
- How many combined points are shared between Louisville and Ohio State?

## Voting Method: Bracket Voting

Definition 31 (Method: Bracket Voting). Each voter gives a complete ranking of the candidates.

- Using the voter rankings, make a Matchup Chart (as you would if you were using the Pairwise Comparison method).
- A predetermined candidate (you are always told which one) is chosen to be the winner. Cross Out all matchups where that candidate loses. If the candidate loses ALL matchups then the candidate cannot win under Bracket Voting.
- Start by arranging the candidates in a "Bracket" so that the chosen candidate beats another candidate. Then use the comparisons to find a third candidate that either of the first two candidates can beat. Repeat this process until all candidates appear in the bracket. The "shape" of the bracket may vary with examples and choices made.

Example 32 (NCAA Basketball 1). 6 coaches give informally rankings to 4 college basketball teams. Their predictions for Indiana (I), Louisville (L), Ohio State University ( $\mathbf{O}$ ), and Kentucky ( $\mathbf{K}$ ) are given below:

| Number of Votes | 2 | 1 | 2 | 1 |
| ---: | :---: | :---: | :---: | :---: |
| 1st place | K | L | I | O |
| 2nd place | L | O | K | L |
| 3rd place | O | I | O | I |
| 4th place | I | K | L | K |

- Which team(s) will Kentucky beat if the Pairwise Comparison method is used?
- Which team(s) will Kentucky lose to if the Pairwise Comparison method is used?
- Use the voting information for the previous question to fill in a bracket where Kentucky is the winner of the bracket.

Example 33 (New One Direction Fan Club 1). The Lexington One Direction fan club adds two members (now a total of 42). Again, no one likes Louis so the the four choices for cutest band member are: Harry, Liam, Niall, and Zayn. Here's how the 42 person club votes:

| Votes | 8 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- Who does Zayn beat under the Pairwise Comparison method?
- Who does Zayn lose to under the Pairwise Comparison method?

Example 34 (New One Direction Fan Club 2). The Lexington One Direction fan club adds two members (now a total of 42). Again, no one likes Louis so the the four choices for cutest band member are: Harry, Liam, Niall, and Zayn. Here's how the 42 person club votes:

| Votes | 8 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- Who can Zayn beat using the Pairwise Comparison method? Who can that person beat?
- Design a bracket (with a new shape) where Zayn will win.

Example 35 (New One Direction Fan Club 3). The Lexington One Direction fan club adds two members (now a total of 42). Again, no one likes Louis so the the four choices for cutest band member are: Harry, Liam, Niall, and Zayn. Here's how the 42 person club votes:

| Votes | 8 | 4 | 10 | 12 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- Who can Niall beat using the Pairwise Comparison method? Who can that person beat?
- Design a bracket that will make guarantee Niall will win.

Example 36 (Best Bad Movie 2). Stuart Wellington of the Flophouse podcast asks listeners to vote on their favorite bad movie. The candidates are Castle Freak (CF), Invisible Maniac (IM) and Head of the Family (HF). Listeners give the following preferences:

| Votes | 10 | 12 | 15 | 4 |
| :---: | :---: | :---: | :---: | :---: |
| 1st place | CF | IM | HF | IM |
| 2nd place | HF | HF | CF | CF |
| 3rd place | IM | CF | IM | $\mathbf{H F}$ |

- Design a bracket so that Head of the Family (HF) wins?
- What way can you increase the blue votes so that Invisible Maniac (IM) wins under ANY bracket?

## 2-Candidate Voting

The next definitions and examples involve elections that have only two candidates. We will use this to introduce our ideas of fairness in voting.

Definition 37 (2-Candidate Voting Method: Majority Rule). Majority Rule is a form of 2 -candidate voting in which the candidate who receives the most votes is the winner of the election.

Example 38. The ballots for an election are given below,

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

if the election is to be decided by Majority Rule then Candidate A is the winner. In a 2 -candidate election, unless both candidates tie, one candidate will always have a majority.

All of the methods we have learned so far (Plurality, Borda, Plurality with Elimination, Pairwise Comparison) become Majority Rule when applied to 2-Candidate elections.

Definition 39 (2-Candidate Voting Method: Minority Rule). Minority Rule is a form of 2 -candidate voting in which the candidate who receives the least votes is the winner of the election.

Example 40. The ballots for an election are given below,

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | B |
| 2nd | A |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | A |  |  |
| 2nd | B |  |  |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

if the election is to be decided by Minority Rule then Candidate B is the winner.

Definition 41 (2-Candidate Voting Method: Dictatorship). A
Dictatorship is a form of voting in which one person (the dictator) has absolute authority. Their vote is the only one that counts. The winner of the election is determined by the dictator's vote.

Example 42. The ballots for an election are given below and

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | B |
| 2nd | A |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

Dictator $\uparrow$
then Candidate B will win under a dictatorship.
Although it is defined here for 2-candidate elections, Dictatorship is a possible method any kind of election.
Definition 43 (2-Candidate Voting Method: Imposed Rule). Imposed Rule is a form of voting in which the election is predetermined before the ballots are cast. The election is not determined by how people vote because nobody's vote matters.

Example 44. The ballots for an election are given below,

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| :--- | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

| Ballot |  |  |
| :---: | :--- | :---: |
| 1st | A |  |
| 2nd | B |  |

but the current Imposed Rule government decides that Candidate C is the winner. Then Candidate C is the winner.

The example given is meant to convey how the actual ballots are disregarded. In most uses of Imposed Rule, the winning candidate actually appears on the ballot.
Example 45 (2-Candidate Elections 1). Five employees of a restaurant vote on which of their managers (designated as $\mathbf{A}$ and $\mathbf{B}$ ) should be promoted to a new position in Fairbanks, AK. They cast the following ballots:

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

- If Majority Rule is used, which manager wins the promotion?
- If Employee \#3 (whose ballot is in the center) is the Dictator and the winner is determined using Dictatorship, which manager will win the promotion?

Example 46 (2-Candidate Elections 2). Five employees of a restaurant vote on which of their managers (designated as $\mathbf{A}$ and $\mathbf{B}$ ) should be promoted to a new position in Fairbanks, AK. They cast the following ballots:

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

| Ballot |  |  |
| ---: | :--- | :---: |
| 1st | B |  |
| 2nd | A |  |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

- If Minority Rule is used, which manager wins the promotion?
- What are the possible outcomes if the method of Imposed Rule is used?

Example 47 (2-Candidate Elections 3). Five employees of a restaurant vote on which of their managers (designated as $\mathbf{A}$ and $\mathbf{B}$ ) should be promoted to a new position in Fairbanks, AK. They cast the following ballots:

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | B |
| 2nd | A |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

- If everyone reverses how they vote (1st place goes to 2nd, 2nd place goes to 1st), which manager will win if Majority Rule is used? Is this different than before?
- Do you think a reversal (as above) of how people vote should change the outcome of an election? Why or why not?

Example 48 (2-Candidate Elections 4). Five employees of a restaurant vote on which of their managers (designated as $\mathbf{A}$ and $\mathbf{B}$ ) should be promoted to a new position in Fairbanks, AK. They cast the following ballots:

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

- If Voter 1 (leftmost ballot) decides to put Candidate B in 1st place instead (with Candiate A in 2nd place), who will win the election if Minority Rule is used?
- The process above effectively gives Candidate B more votes. Should receiving more votes hurt a Candidate's chance of winning? Why or why not?

Example 49 (2-Candidate Elections 5). Five employees of a restaurant vote on which of their managers (designated as $\mathbf{A}$ and $\mathbf{B}$ ) should be promoted to a new position in Fairbanks, AK. They cast the following ballots:

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | A |  |  |
| 2nd | B |  |  |

|  |  |  | Ballot |
| :--- | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

- If Voter 1 (leftmost ballot) and Voter 3 (center ballot) decide to swap ballots, which manager will win if Majority Rule is used? What if Minority Rule is used?
- Do you think two voters agreeing to swap their ballots as above should change the outcome of an election? Why or why not?

## 2-Candidate Fairness

Now we want to discuss what it means for a voting method to be fair. The following definitions should all make sense if you understand the reasoning behind the definition. Try to focus on where these definitions come from, not necessarily just memorizing them.

Definition 50 (2-Candidate Fairness Idea: Anonymous). A voting system is anonymous if it treats all of the voters equally. If any two voters traded ballots, the outcome of the election would remain the same.

Example 51. So for example, if the ballots below

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

became the following (ballots 2 and 3 swap position)

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | B |
| 2nd | A |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | A |  |  |
| 2nd | B |  |  |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

the winner of the election will stay the same if the voting system is anonymous.

Definition 52 (2-Candidate Fairness Idea: Monotone). A voting system is monotone if it is impossible for a winning candidate to become a losing candidate by gaining votes or for a losing candidate to become a winning candidate by losing votes.

Example 53. So for example, if the ballots below

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | B |
| 2nd | A |

became the following (ballot 3 changes)

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

the winner of the election will stay the same if the voting system is monotone.

Definition 54 (2-Candidate Fairness Idea: Neutral). A voting system is neutral if it treats candidates equally. This means if every voter switched their vote to the other candidate, the outcome of the election switches too.

Example 55. So for example, if the ballots below

were switched (everyone swaps their vote around)

|  | Ballot |
| ---: | :--- |
| 1st | B |
| 2nd | A |

|  | Ballot |
| ---: | :--- |
| 1st | B |
| 2nd | A |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | B |  |  |
| 2nd | A |  |  |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | A |  |  |
| 2nd | B |  |  |

the winner of the election will also switch if the voting system is neutral.
Theorem (May's Theorem). In a two-candidate election Majority Rule is the only voting system that is anonymous, neutral, and monotone. If there are an odd number of voters, Majority Rule will also avoid all possibility of ties.

A theorem is a (mathematical) idea that is true in all cases whenever certain conditions are met. It is (usually) easy to show a certain idea DOESN' $T$ work by just finding an example that meets the conditions but without the conclusion we want.

Proving a theorem, which means establishing a general principle, is much harder to do.

May's Theorem conclusively establishes what may feel obvious: Majority Rule is the best form of 2-candidate voting.

Adjusting Elections to Get Certain Results
Example 56 (Gus Chewed Some Ballots 3). Some graduate students in sociology want to look at some historical data. Unfortunately, Gus the dog chewed up the summary of an election from a long time ago! (The actual ballots have been lost to time.) In the election below, it is known that $\mathbf{1 3}$ total votes were cast! The two unknown votes could be anything!

$$
\begin{array}{rccc}
\text { Number of Votes } & 7 & 3 & 1 \\
\text { 1st Place } & \mathbf{A} & \mathbf{B} & \mathbf{C} \\
\text { 2nd Place } & \mathbf{B} & \mathbf{C} & \mathbf{A} \\
\text { 3rd Place } & \mathbf{C} & \mathbf{A} & \mathbf{B}
\end{array}
$$

- Where should the extra votes go if Candidate $\mathbf{A}$ is going to win using the Borda method?
- Could the extra votes go anywhere to make Candidate $\mathbf{B}$ win using the Borda method?

Voting Fairness Idea: Majority Criterion
Definition 57 (Voting Fairness Idea: Majority Criterion (MJ)). A voting system satisfies the Majority Criterion if a candidate with over $50 \%$ of first-place votes automatically wins the election.

In the ballots below,

Candidate A will automatically win the election if the voting system satisfies the Majority Criterion.
This idea of fairness in voting usually feels "the most fair". This may have more to do with how we have been conditioned to think about voting.

Example 58 (Gus Chewed Some Ballots 1). On election day, 11 voters cast their votes. Unfortunately Gus, the dog kept at the local polling station, got into the ballots and ate some of the results. Only the following information is known:

| Number of Votes | 8 | 2 | 1 |
| ---: | :---: | :---: | :---: |
| 1st Place | $\mathbf{A}$ | $\mathbf{B}$ | $\mathbf{C}$ |
| 2nd Place | $?$ | $?$ | $?$ |
| 3rd Place | $?$ | $?$ | $?$ |

- Which candidate will win if the Plurality Method is used? How do you know for sure?
- How many absentee ballots (not included in the 11 above) could there be to guarantee your answer above is correct?

Example 59 (Gus Chewed Some Ballots 4). Gus regurgitates the chewed summary. GROSS! The sociology graduate students are able to examine all of the votes of the historical election. The summary shows the following:

$$
\begin{array}{rccc}
\text { Number of Votes } & 7 & 5 & 1 \\
\text { 1st Place } & \mathbf{A} & \mathbf{B} & \mathbf{C} \\
\text { 2nd Place } & \mathbf{B} & \mathbf{C} & \mathbf{A} \\
\text { 3rd Place } & \mathbf{C} & \mathbf{A} & \mathbf{B}
\end{array}
$$

- Describe the nature of Candidate A's victory if the Plurality method is used?
- Who wins if the Borda method is used? What does the example tell you about the Borda method and fairness?

Example 60 (Best Bad Movie 3). Stuart Wellington of the Flophouse podcast asks listeners to vote on their favorite bad movie. The candidates are Castle Freak (CF), Invisible Maniac (IM) and Head of the Family (HF). Listeners give the following preferences:

| Votes | 17 | 18 | 12 | $?$ |
| :---: | :---: | :---: | :---: | :---: |
| 1st place | CF | HF | HF | IM |
| 2nd place | HF | IM | CF | CF |
| 3rd place | IM | CF | IM | HF |

- Find a number for the blue votes that will guarantee IM wins in the first round using the Plurality with Elimination method.
- An election has 4 candidates ( $\mathbf{A}, \mathbf{B}, \mathbf{C}, \mathbf{D})$ and candidate $\mathbf{A}$ wins the majority. Can you say for certain who will win if Plurality with Elimination is used?

## Voting Fairness Idea: Monotonicity Criterion

Definition 61 (Voting Fairness Idea: Monotonicity Criterion (MO)). A voting system satisfies the Monotonicity Criterion if an improvement in a given candidate's vote, without changing the relative quality of the other candidate's votes, does not hurt the given candidate's chance of winning the election.

Like what we saw with 2-Candidate elections, if the ballots below

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

became the following

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

(a change in Ballot $\# 5 \downarrow$ )

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  | Ballot |
| ---: | :--- |
| 1st | C |
| 2nd | B |
| 3rd | A |

this should NOT HURT Candidate C (because there are now more favorable 1st-place votes). This happens when a voting system satisfies the Monotonicity Criterion.

Example 62 (Gus Chewed Some Ballots 2). During the next election day, 15 voters cast their votes. And again Gus gets into the ballots! This time the chewed ballots look like the following:

| Number of Votes | 4 | 5 | 1 |
| ---: | :---: | :---: | :---: |
| 1st Place | $\mathbf{A}$ | $\mathbf{B}$ | $\mathbf{C}$ |
| 2nd Place | $?$ | $?$ | $?$ |
| 3rd Place | $?$ | $?$ | $?$ |

- Five absentee ballots were not chewed. Before looking at the ballots, which candidates could win if the Plurality method is used?
- From the chewed ballot information, it appears that Candidate $\mathbf{B}$ will win the election. If all absentee ballots support Candidate $\mathbf{B}$, is there a chance that Candidate B could lose under Plurality?

Example 63 (Orange is the New Black 1). Piper must determine a new snack to be offered in the prison vending machine. She consults fellow prisoners and finds that Chips, Fruit, Nuts, and Pretzels are the top choices. The prisoners give the following preferences:

$$
\begin{array}{cccccc}
\text { Votes } & 7 & 8 & 10 & 2 & 2 \\
\text { 1st place } & \mathrm{C} & \mathrm{~N} & \mathrm{P} & \mathrm{C} & \mathrm{C} \\
\text { 2nd place } & \mathrm{N} & \mathrm{P} & \mathrm{~F} & \mathrm{P} & \mathrm{~F} \\
\text { 3rd place } & \mathrm{F} & \mathrm{C} & \mathrm{C} & \mathrm{~F} & \mathrm{~N} \\
\text { 4th place } & \mathrm{P} & \mathrm{~F} & \mathrm{~N} & \mathrm{~N} & \mathrm{P}
\end{array}
$$

- Which snack should be eliminated in the first round of Plurality with Elimination?
- Which snack will win if Plurality with Elimination is used?

Example 64 (Orange is the New Black 2). A prison riot destroys the vote results before they can be certified. Again the prisoners are asked to vote on Chips, Fruit, Nuts, and Pretzels are the top choices. Some people remember which snack won previously, and change their vote to be on the winning side:

| Votes | 7 | 8 | 10 | 2 | 2 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | C | N | P | P | P |
| 2nd place | N | P | F | C | C |
| 3rd place | F | C | C | F | F |
| 4th place | P | F | N | N | N |

- Which snack will win if Plurality with Elimination is used?
- Does the same snack win as in Plurality with Elimination election?
- How does this election differ from the previous election?

Voting Fairness Idea: Condorcet Criterion
Definition 65 (Voting Fairness Idea: Condorcet Criterion (CO)). A candidate who wins all possible points if Pairwise Comparison were used (even if another method is actually being used) is called a Condorcet Candidate (or Condorcet Winner). A voting system satisfies the Condorcet Criterion if the Condorcet Candidate always wins.

In the ballots below,

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  | Ballot |
| :---: | :--- |
| 1st | C |
| 2nd | B |
| 3rd | A |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | C |  |  |
| 2nd | B |  |  |
| 3rd | A |  |  |

we get the following comparisons:

| Matchup | Points | Matchup | Points | Matchup | Points |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A vs. B | 1 for A | A vs. C | 1 for A | B vs. C | 1 for C |

Candidate A is the Condorcet Candidate with 2 points, the most possible in a 3 -candidate election. To satisfy the Condorcet Criterion, a voting system must have Candidate A as the winner.
Example 66 (Best Bad Movie 4). Stuart Wellington of the Flophouse podcast asks listeners to vote on their favorite bad movie. The candidates are Castle Freak (CF), Invisible Maniac (IM) and Head of the Family (HF). Listeners give the following preferences:

| Votes | 17 | 18 | 12 | $?$ |
| :---: | :---: | :---: | :---: | :---: |
| 1st place | CF | HF | HF | IM |
| 2nd place | HF | IM | CF | CF |
| 3rd place | IM | CF | IM | HF |

- Find a number for the blue votes that will guarantee IM wins using the Pairwise Comparison method.
- How many points will a majority candidate earn in a Pairwise Comparison election with 4 candidates? What about 5 candidates?

Example 67 (2012 Best Picture 3). 15 Academy Voters get together to compare their preferences for the 2012 Best Picture. The films under consideration are Argo, Life of Pi, and Zero Dark Thirty. Preference for the voters are summarized below

| Votes | 6 | 5 | 4 |
| :---: | :---: | :---: | :---: |
| 1st place | $\mathbf{A}$ | $\mathbf{Z}$ | $\mathbf{L}$ |
| 2nd place | $\mathbf{L}$ | $\mathbf{L}$ | $\mathbf{Z}$ |
| 3rd place | $\mathbf{Z}$ | $\mathbf{A}$ | $\mathbf{A}$ |

- Which film wins if the Plurality method is used?

Example 68 (2012 Best Picture 4). 15 Academy Voters get together to compare their preferences for the 2012 Best Picture. The films under consideration are Argo, Life of Pi, and Zero Dark Thirty. Preference for the voters are summarized below

| Votes | 6 | 5 | 4 |
| :---: | :---: | :---: | :---: |
| 1st place | $\mathbf{A}$ | $\mathbf{Z}$ | $\mathbf{L}$ |
| 2nd place | $\mathbf{L}$ | $\mathbf{L}$ | $\mathbf{Z}$ |
| 3rd place | $\mathbf{Z}$ | $\mathbf{A}$ | $\mathbf{A}$ |

- Which film is eliminated in the first round of the Plurality with Elimination method?
- How many points does the winning film receive if the Pairwise Comparison method is used?

Example 69 (2013 NCAA Football 8). 37 Sports Writers made predictions for the top 4 rankings in 2013 NCAA football. Their predictions for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) are given below:

| Number of Votes | 14 | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | LV | LV |
| 3rd Place | OR | LV | AL | OR | AL |
| 4th Place | LV | OSU | OSU | OSU | OSU |

- Do you remember which team wins if the Borda method is used?
- Do you remember which team wins if the Pairwise Comparison method is used? How many points did that team get?

Voting Fairness Idea: CO-MJ Connection
If a candidate gets more than half of all 1st-place votes, then that candidate beats every other candidate with over half the vote. Therefore, this majority candidate will will win all head-to-head matchups against every other candidate.

In other words, the Majority Candidate is ALWAYS the Condorcet Candidate!

If the voting system satisfies the Condorcet Criterion, then the Majority candidate has to be the winner. This says that the candidate who has more than $50 \%$ of 1st-place votes is the winner. In other words:

Theorem (CO-MJ Connection). Any voting system where the Condorcet Criterion (CO) holds is a voting system where the Majority Criterion (MJ) holds as well.
Turning the logic around, if the Majority Criterion (MJ) DOES NOT hold in a voting system, then the Condorcet Criterion (CO) DOES NOT hold as well.

Voting Fairness Idea: Indep. of Irr. Alternatives (IIA)

Definition 70 (Voting Fairness Idea: Ind. of Irrel. Alternatives Criterion (IIA)). If any candidate wins a first election, and one of the irrelevant losing candidates drops out before the second election, then the previous winner should also win the second election.

In the ballots below,

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  | Ballot |
| ---: | :--- |
| 1st | A |
| 2nd | C |
| 3rd | B |

|  |  |  | Ballot |
| ---: | :--- | :---: | :---: |
| 1st | C |  |  |
| 2nd | B |  |  |
| 3rd | A |  |  |

suppose there is a voting system in which Candidates A and C are in contention to win the election, but Candidate B does not have a chance at winning. A voting system satisfies the Independence of Irrelevant Alternatives Criterion (IIA) only if the outcome of the election does not change from absence of Candidate B.
Ralph Nader and Ross Perot are real-world examples of "irrelevant alternatives" or "spoiler" candidates in U.S. presidential elections.

Example 71 (Another New One Direction Fan Club 1). The Lexington One Direction fan club adds two members (now a total of 42). Again, no one likes Louis so the the four choices for cutest band member are: Harry, Liam, Niall, and Zayn. Here's how the 42 person club votes:

| Votes | 8 | 4 | 8 | 12 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | H | N | Z | N | L |
| 2nd place | L | H | H | L | H |
| 3rd place | N | L | L | Z | Z |
| 4th place | Z | Z | N | H | N |

- Which candidate wins if the Plurality method is used? Which candidate(s) is/are most irrelevant if the Plurality method is used? Why?
- Does the outcome of the election change if one (or more) of the irrelevant candidates drop out?

Example 72 (2013 NCAA Football 9). The predictions of 37 Sports Writers (given below) for Alabama (AL), Louisville (LV), Ohio State University (OSU), and Oregon (OR) make Alabama (AL) the Borda winner.

| Number of Votes | 14 | 10 | 8 | 4 | 1 |
| ---: | :---: | :---: | :---: | :---: | :---: |
| 1st Place | OSU | OR | LV | AL | OR |
| 2nd Place | AL | AL | OR | LV | LV |
| 3rd Place | OR | LV | AL | OR | AL |
| 4th Place | LV | OSU | OSU | OSU | OSU |

- Ohio State (OSU) is not even close to winning if the Borda method is used. Which team wins using the Borda method if OSU is completely dropped from consideration?
- Louisville ( $\mathbf{L V}$ ) is not even close to winning if the Borda method is used. Which team wins using the Borda method if $\mathbf{L V}$ is completely dropped from consideration?

Example 73 (School Board Election 1). Four candidates A, B, C, and D are running for a seat for the School Board Executive Committee. The School Board voters give the following preferences:

| Number of votes | 7 | 7 | 8 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| 1st place | A | $\mathbf{C}$ | $\mathbf{D}$ | $\mathbf{B}$ |
| 2nd place | $\mathbf{B}$ | $\mathbf{B}$ | $\mathbf{C}$ | $\mathbf{A}$ |
| 3rd place | $\mathbf{C}$ | A | $\mathbf{B}$ | $\mathbf{C}$ |
| 4th place | $\mathbf{D}$ | $\mathbf{D}$ | $\mathbf{A}$ | $\mathbf{D}$ |

- Is Candidate B irrelevant under the Plurality with Elimination method? What about Candidate C?
- Who wins if the Plurality with Elimination is used?
- Who will win if Candidate $\mathbf{C}$ drops out of the election?

Example 74 (School Board Election 2). A different School Board has four candidates A, B, C, and D running for a seat for the School Board Executive Committee. The School Board voters give the following preferences:

| Number of votes | 10 | 7 | 5 | 7 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1st place | A | D | B | C | B |
| 2nd place | C | B | C | D | C |
| 3rd place | B | A | A | A | D |
| 4th place | D | C | D | B | A |

- Who wins the election if the Pairwise Comparison method is used?
- If Candidate $\mathbf{D}$ drops out, will the winner of the election change in any way?

Example 75 (School Board Election 3). Below is a summary of the previous School Board Election 2 election. The winner of Head-to-Head Comparisons are given:

| Comp. | Winner | Comp. | Winner | Comp. | Winner |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A vs B | A | B vs C | C | C vs D | C |
| A vs C | A | B vs D | B |  |  |
| A vs D | D |  |  |  |  |

- Can you make a bracket where Candidate $\mathbf{B}$ is the winner?
- If Candidate D drops out, can you make a bracket where Candidate $\mathbf{B}$ is the winner?

## Fairness Idea: Arrow's Theorem

Theorem (Arrow's Impossibility Theorem). In an election with more than two candidates, there is NO FAIR method of voting that will simultaneously satisfy the Majority criterion, the Condorcet criterion, the monotonicity criterion, and the Independence of Irrelevant Alternatives criterion.
Here is a summary of how each of the Voting Methods fails the Fairness Criteria:

|  | MO | MJ | CO | IIA |
| :--- | :---: | :---: | :---: | :---: |
| Plurality | $\checkmark$ | $\checkmark$ | X | X |
| Borda | $\checkmark$ | X | X | X |
| Plurality w/ Elimination | X | $\checkmark$ | X | X |
| Pairwise Comparison | $\checkmark$ | $\checkmark$ | $\checkmark$ | X |
| Bracket | $\checkmark$ | $\checkmark$ | $\checkmark$ | X |

( $\checkmark$ means "always satisfied" while "X" can fail to satisfy)
