

MA 113 CALCULUS I, FALL 2018
WRITTEN ASSIGNMENT #5
Due Friday, October 26, 2018, at the beginning of lecture

Instructions: The purpose of this assignment is to develop your ability to formulate and communicate mathematical arguments. Your complete assignment should have your name and section number on each page, be stapled, and be neat and legible. *Unreadable work will receive no credit.*

You should provide well-written, complete answers to each of the questions. We will look for correct mathematical arguments, complete explanations, and correct use of English. Your solution should be formulated in complete sentences. As appropriate, you may want to include diagrams or equations written out on a separate line. You may read your textbook to find examples of how we communicate mathematics.

Students are encouraged to use word-processing software to produce high quality solutions. However, you may find that it is simpler to add graphs and equations using pen or pencil.

$$\text{Let } f(x) = \frac{x^5}{5} - \frac{3x^4}{2} + 3x^3 + 2x^2 - 12x + 7000.$$

1. Find $f'(x)$.
2. Find the critical numbers of $f(x)$ on the open interval $(-1.5, 4)$.
3. Find the local extrema of $f(x)$ on the open interval $(-1.5, 4)$.
4. Find the absolute maximum and absolute minimum values of $f(x)$ on the closed interval $[-1.5, 4]$.
