Section: _________  
Last 4 digits of student ID #: __________

This exam has ten multiple choice questions (four points each) and five free response questions (seven points each). Additional blank sheets are available if necessary for scratch work. No books or notes may be used. Turn off your cell phones and do not wear ear-plugs during the exam. You may use a calculator, but not one which has symbolic manipulation capabilities.

On the multiple choice problems:
1. You must give your final answers in the multiple choice answer box on the front page of your exam.
2. Carefully check your answers. No credit will be given for answers other than those indicated on the multiple choice answer box.

On the free response problems:
1. Clearly indicate your answer and the reasoning used to arrive at that answer (unsupported answers may not receive credit).
2. Give exact answers, rather than decimal approximations to the answer (unless otherwise stated).

Each free response question is followed by space to write your answer. Please write your solutions neatly in the space below the question. You are not expected to write your solution next to the statement of the question.

Webassign Score | 75  
Percentage     | 100
Record the correct answer to the following problem on the front page of this exam.

(1) Describe the end behavior of the graph of

\[ f(x) = \frac{3x^4 - 2x^3 + 2x - 1}{5x^3 - x + 10} \]

as \( x \to \infty \).

A) \( y \to \infty \)
B) \( y \to -\infty \)
C) \( y \to 0 \)
D) \( y \to -\frac{1}{10} \)
E) \( y \to \frac{3}{5} \)

(2) If the number of bacteria in a jar doubles every 2 hours, and the jar is full after 20 hours, when was the jar 1/4 full?

A) 5 hours
B) 18 hours
C) The time can not be determined since the initial quantity of bacteria is not given.
D) 4 hours.
E) The jar was never 1/4 full.

(3) Find the domain of \( f(x) = \ln(x - 3) \).

A) \( (-\infty, \infty) \)
B) \( (0, \infty) \)
C) \( (-\infty, -3) \cup (3, \infty) \)
D) \( (0, 3] \)
E) \( (3, \infty) \)
Record the correct answer to the following problem on the front page of this exam.

(4) Simplify

\[ e^{\frac{1}{2} \ln(x-1)} \] .

A) \( \frac{1}{2} (x - 1) \)
B) \( \sqrt{x - 1} \)
C) \( \sqrt{xe} \)
D) \( (x - 1)^2 \)
E) \( \sqrt{x - \frac{1}{2}} \)

(5) Solve for \( x \)

\[ \sqrt{x + 7} = x + 1 \]

A) There is no solution.
B) \( x = -3 \) and \( x = 2 \).
C) \( x = -3 \) only.
D) \( x = 2 \) only.
E) \( x = -7 \) only.

(6) Solve for \( x \).

\[ x^2 = 15 - 2x \]

A) \( x = 3 \) and \( x = -5 \).
B) \( x = 5 \) and \( x = -3 \).
C) The equation has no real solutions.
D) \( x = \sqrt{15 - 2x} \)
E) \( x = 3 \) only.
(7) Solve the inequality \[|2x + 3| < 3.\]

A) \((-\infty, -3) \cup (0, \infty)\)
B) The inequality has no solution.
C) \([6, \infty)\)
D) \((-3, 0)\)
E) \((-\infty, -3]\)

(8) Find the amount in a bank account after two years if $2000 is initially deposited at an interest rate of 3.2% compounded monthly. Round your answer to the nearest cent.

A) $3484.80
B) $2025.22
C) $2132.00
D) $2132.18
E) $2130.05

(9) Solve for \(x\) exactly.

\[3^{2x-7} = 4\]

A) \(e^{27} - 5/2\)
B) \(\frac{\log_3(4) + 7}{2}\)
C) \(\frac{\log_3(22)}{2}\)
D) \(\log_4(3) - 7/3\)
E) \(\frac{23}{3}\)
(10) Which statement describes the graph of

\[ f(x) = \frac{x^2 + x - 6}{x^2 - 4} \] ?

A) The graph has a hole at \( x = 2 \) and no vertical asymptotes.
B) The graph has no vertical asymptotes, nor any holes.
C) The graph has a vertical asymptote of \( x = -2 \) and a hole when \( x = 2 \).
D) The graph has a hole at \( x = -2 \) and a vertical asymptote of \( x = 2 \).
E) The domain of the graph is all real numbers.

Some Useful Formulas

\[ B(t) = P (1 + r)^t \]
\[ B(t) = P \left(1 + \frac{r}{n}\right)^{nt} \]
\[ P(t) = P_0e^{rt} \]
\[ Q(t) = Q_0e^{-rt} \]
Write the expression in terms of a single logarithm.

\[ 2 \log(x - 1) - \log(x + 3) - \frac{1}{2} \log(x^2) \]
(12) Solve the inequality exactly. Show all work. Do not use a graphing calculator to get the answer.

\[
\frac{x - 4}{x - 2} \geq 0
\]
(13) Find the time it takes for an investment of $1500 to grow to $2100 if it is put into an account with a 5.2% interest rate compounded continuously. Solve algebraically and show all work.
(14) Solve for $x$ exactly. Show all work. Do not use graphical techniques.

$$x^4 - x^2 - 6 = 0$$
Use a graphing calculator to find the approximate solutions to the inequality. Sketch the graph or graphs that you are using to solve the problem. The answer should be accurate to three decimal places. Express your answer in interval notation.

\[ |x^2 + 3x + 5| > 8 \]
