This exam has eleven multiple choice questions (five points each) and five free response questions (nine points each). Additional blank sheets are available if necessary for scratch work. No books or notes may be used. Turn off your cell phones and do not wear ear-plugs during the exam. You may use a calculator, but not one which has symbolic manipulation capabilities.

On the multiple choice problems:
1. You must give your final answers in the multiple choice answer box on the front page of your exam.
2. Carefully check your answers. No credit will be given for answers other than those indicated on the multiple choice answer box.

On the free response problems:
1. Clearly indicate your answer and the reasoning used to arrive at that answer (un-supported answers may not receive credit),
2. Give exact answers, rather than decimal approximations to the answer (unless otherwise stated).

Each free response question is followed by space to write your answer. Please write your solutions neatly in the space below the question. You are not expected to write your solution next to the statement of the question.
Record the correct answer to the following problem on the front page of this exam.

(1) If a radioactive substance decays with a decay constant of \( r = 0.0005 \), how long to the nearest year until there is one third of the substance remaining.

Useful formulas

\[
\sin(x + y) = \sin(x) \cos(y) + \cos(x) \sin(y)
\]
\[
\sin(x - y) = \sin(x) \cos(y) - \cos(x) \sin(y)
\]
\[
\cos(x + y) = \cos(x) \cos(y) - \sin(x) \sin(y)
\]
\[
\cos(x - y) = \cos(x) \cos(y) + \sin(x) \sin(y)
\]
(12) Suppose \( \sin(\theta) = -\frac{2}{5} \) and \( \theta \) is in the third quadrant.

(a) Find \( \cos(\theta) \)

\]

(b) Find \( \cos(2\theta) \)

\[
\cos(2\theta) = \cos(\theta + \theta) = \cos(\theta)\cos(\theta) - \sin(\theta)\sin(\theta)
\]

\[
= \left(-\frac{\sqrt{21}}{5}\right) \left(-\frac{\sqrt{21}}{5}\right) - \left(-\frac{2}{5}\right) \left(-\frac{2}{5}\right)
\]

\[
= \frac{21}{25} - \frac{4}{25} = \frac{17}{25}

(13) Use the sum or difference of angles formulas to find exactly $\cos\left(\frac{\pi}{12}\right)$

Hint: Write $\frac{\pi}{12}$ as the sum or difference of two angles from the reference triangles.

\[
\frac{\pi}{12} = \frac{4\pi}{12} - \frac{3\pi}{12} = \frac{\pi}{3} - \frac{\pi}{4}
\]

\[
\cos\left(\frac{\pi}{12}\right) = \cos\left(\frac{\pi}{3} - \frac{\pi}{4}\right) = \cos\left(\frac{\pi}{3}\right)\cos\left(\frac{\pi}{4}\right) + \sin\left(\frac{\pi}{3}\right)\sin\left(\frac{\pi}{4}\right)
\]

\[
= \left(\frac{1}{2}\right)\left(\frac{\sqrt{2}}{2}\right) + \left(\frac{\sqrt{3}}{2}\right)\left(\frac{\sqrt{2}}{2}\right)
\]

\[
= \frac{\sqrt{2}}{4} + \frac{\sqrt{6}}{4} = \frac{\sqrt{2} + \sqrt{6}}{4}
\]

\( n = 0, 1, 2, 3, \ldots \)

(16) Solve the equation for $x$

$$\log_3(x) = -\log_3(x - 6) + 3.$$ 

$$\log_3(x) + \log_3(x - 6) = 3$$ 

$$\log_3(x(x - 6)) = 3$$ 

$$x^2 - 6x = 27$$ 

$$x^2 - 6x - 27 = 0.$$ 

$$(x - 9)(x + 3) = 0.$$ 

$$x = 9, x = -3$$
