The purpose of this class is to answering questions and to help students to work together to solve problems.

Assignments: Students are expected to work ahead of time on the worksheet and to attempt webwork problems for the subject covered. Most time in class will be spent in group work. Our goal is for students to develop problem solving strategies and a deeper understanding of mathematics. Students will be expected to work for the full 75 minutes on the assigned problems, write out solutions, prepare and present their solutions clearly and completely.

Attendance:
You are expected and strongly advised to attend all lectures and recitations. You will receive full recitation attendance credit if you have at most 2 unexcused absences. Coming later or leaving earlier without permission may be counted as an unexcused absence.

Additional comments:
Use common courtesy (as, for instance, by turning your cell phones off during class).

Please see common syllabus for more details.
