MA 113 — Calculus I Final Exam

Answer all of the questions 1 - 7 and **two** of the questions 8 - 10. Please indicate which of problem 8 - 10 is not to be graded by crossing through its number in the table below. Answer as many extra credit problems as you wish to; please carefully read the instructions on the last page of the exam.

Additional sheets are available if necessary. No books or notes may be used. Please, turn off your cell phones and do not wear ear-plugs during the exam. You may use a calculator, but not one which has symbolic manipulation capabilities. Please:

- 1. clearly indicate your answer and the reasoning used to arrive at that answer (unsupported answers may not receive credit),
- 2. give exact answers, rather than decimal approximations to the answer (unless otherwise stated).

Each question is followed by space to write your answer. Please write your solutions neatly in the space below the question. You are not expected to write your solution next to the statement of the question.

(1) Find the first derivatives of the following functions. Show your work!
(a) f(x) = 4x² cos(3x + 1).

(b)
$$g(x) = \frac{3}{\sqrt{4+6x-x^2}}.$$

(c)
$$h(x) = \frac{e^x + 2x}{x^2 - 3x + 1}$$
.

- (a) f'(x) = _____
- (b) g'(x) =_____
- (c) h'(x) =_____

(2) Find the following limits. Show your work!

(a)
$$\lim_{x \to 3} \frac{\cos(3x-9) - x + 2}{x-3}$$
.

(b)
$$\lim_{x \to \infty} e^{-2x} \ln(x+3).$$

(a)
$$\lim_{x \to 3} \frac{\cos(3x-9) - x + 2}{x-3} =$$
(b)
$$\lim_{x \to \infty} e^{-2x} \ln(x+3) =$$

- (3) Consider the function $f(x) = x^5 5x$. For the following problems be sure to justify your answer!
 - (a) Find all values for x where f(x) has a local maximum.

(b) Find all values for x where f(x) has a local minimum.

(c) Find all values for x where f(x) has a point of inflection.

(a) f(x) has a local maximum at _____

(b) f(x) has a local minimum at _____

(c) f(x) has a point of inflection at _____

(4) Find the following integrals.

(a)
$$\int (7x^4 + 3x^2 - 5e^x + 6\cos x) dx =$$

(b)
$$\int_{2}^{x} \frac{3t^{2} + 2t + 4}{t} dt =$$

(c)
$$\int x\sqrt{x^2 - 9} \, dx = \underline{\qquad}$$

(d)
$$\int_0^{\pi} t \sin(t^2) dt =$$

(5) A rock is thrown vertically upward from 30 meters above ground with a speed of 5 meters per second. Find the speed of the rock when it hits the ground. Use that the acceleration due to gravity is 10 m/sec² in the downward direction.

Speed is: _____

(6) Consider the curve described by the equation

$$x^2 - xy + y^2 = 7.$$

(a) Find the derivative $\frac{dy}{dx}$. Your answer should be an expression in x and y.

(b) Find the slope of the tangent line to this curve at the point (3, 2).

(c) Find the equation of the tangent line to the curve at the point (3, 2). Express it in the form y = mx + b.

```
(a) \frac{dy}{dx} = _____
```

- (b) Slope is _____
- (c) Equation is _____

- (7) Consider the function $F(x) = \int_1^x \frac{t}{3+t^2} dt$, where x is in $(-\infty, \infty)$.
 - (a) Find all interval(s) on which F(x) is decreasing.

(b) Find all interval(s) on which F(x) is concave down.

(a) F(x) is decreasing on _____

(b) F(x) is concave down on _____

Work two of the following three problems. Indicate the problem that is not to be graded by crossing through its number on the front of the exam.

(8) (a) State both parts of the Fundamental Theorem of Calculus. Use complete sentences.

(b) Find the derivative of $F(x) = \int_3^x \cos^4(2t+3) dt$.

(c) Find the derivative of $G(x) = \int_{x^2}^3 \cos^4(2t+3) dt$.

(b)
$$F'(x) =$$

(c) G'(x) =_____

(9) (a) State the Chain Rule. Use complete sentences and include all necessary assumptions.

(b) Suppose f and g are differentiable functions such that

f(3) = 5, f'(3) = 4, g(3) = 9, g'(3) = 2.

(i) Compute h'(3) where $h(x) = \ln \left(f(x)^2 + 5x\right)$.

(ii) Compute k'(3) where $k(x) = f(x^{-1}g(x))$.

(b) h'(3) =_____ k'(3) =_____

(10) For this problem use the information that for a sphere with radius r

the surface area is $4\pi r^2$ and the volume is $\frac{4}{3}\pi r^3$.

A spherical balloon is being inflated so that its surface area increases at a rate of $3 \text{ cm}^2/\text{min}$. (a) Find the rate at which the radius increases at the moment when the radius is 6 cm.

(b) Find the rate at which the volume increases at the moment when the radius is 6 cm.

(a) Radius increases at a rate of _____ cm/min.

(b) Volume increases at a rate of _____ cm³/min.

Extra Credit Problem:

Check the correct answers below. For each correct answer you earn 2 points, and for each incorrect answer 1 point will be subtracted. Therefore, it might be wise to skip a question rather than risking losing a point. However, your final score on this problem will not be negative! You need not justify your answer.

True False

- If the function f is continuous on the open interval (0, 4), then f has an absolute minimum on the closed interval [1, 3].
- $\Box \qquad \int e^{4x} \, dx = \frac{1}{4x+1} e^{4x+1} + C.$
 - $\Box \quad \text{If } f'(a) = 0 \text{ for some } a, \text{ then the function } f \text{ has a local maximum or local minimum at } a.$
- $\square \qquad \square \qquad \lim_{x \to \infty} \frac{\ln(2 + e^x)}{5x} = \frac{1}{5}.$
- $\Box \qquad \Box \qquad \text{If } f'(a) \text{ exists, then } \lim_{x \to a} f(x) = f(a).$
