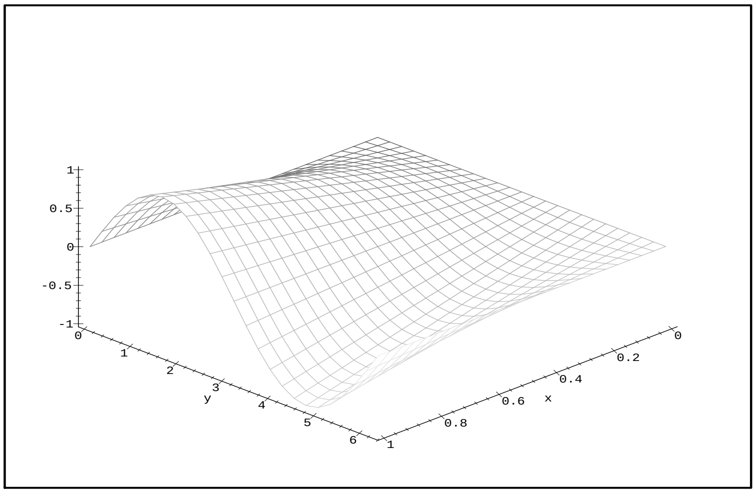
4. Define three transformations $T, G, H : \mathrm{R}^2 \to R^2$ by $T(x, y) = (s, t) = (x^2 - y, 3x + 2y)$, $G(s, t) = (s\cos(t), s\sin(t))$, and $H(x, y) = G(T(x, y))$.

(a) Calculate the matrix of partial derivatives of T.

(b) Calculate the derivative of G.

(c) Use the chain rule to find the derivative of H at (0,0).

3. Let $f : \mathbf{R}^2 \to \mathbf{R}$ be given by $f(x, y) = x \sin(y)$. (Think of f as a temperature function.)



(a) Calculate the gradient of f at $(1, \pi/4)$, and find the largest rate of change of the temperature f at that point.

(b) What is the rate of change of $f(x, y)$ at $(1, \pi/4)$ in the direction $\vec{v} = [1/\sqrt{2}, 1/\sqrt{2}]$?

(c) Sketch the tangent plane to the graph of f at $(1, \pi/4)$ and give its equation.

2. Given the points A(4,3,2), B(0,3,-1), and C(7,0,0).

   (a) Find equations for the plane passing through A, B, and C.

   (b) Find the area of the triangle $\triangle ABC$.

   (c) What angle does the z-axis make with the plane?.

Vector Calculus – Exam I – 9/29/95 Name: ______________________________

1. Let $\vec{u} = [-4, 4, 4]$, $\vec{w} = [1, 3, 3]$.

   (a) Sketch these vectors, and the vector $.75\vec{u} + .50\vec{w}$, on the chart below.

   (b) Calculate the angle between them using dot product.

   (c) Calculate the cross product $\vec{u} \times \vec{w}$ and tell what it means geometrically.

   (d) Where does the line through $(-4, 4, 4)$ and $(1, 3, 3)$ cross the plane $x = 4$?

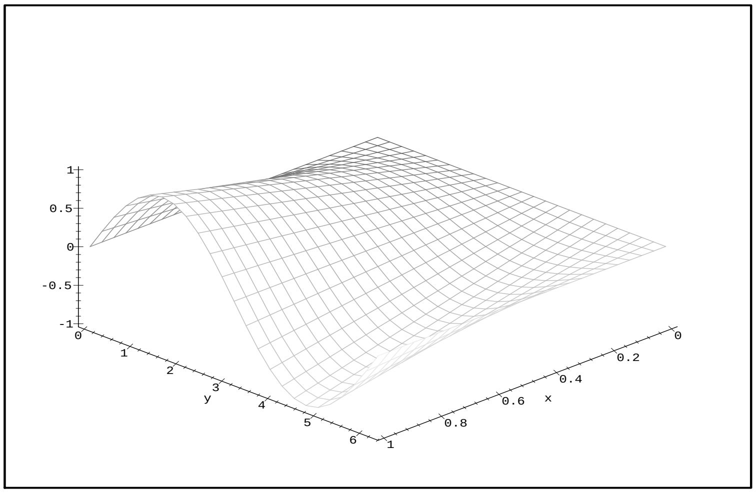
4. Define three transformations $T, G, H : \mathbf{R}^2 \to R^2$ by $T(x, y) = (s, t) = (x^2 - y, 3x + 2y)$, $G(s, t) = (s\cos(t), s\sin(t))$, and $H(x, y) = G(T(x, y))$.

(a) Calculate the matrix of partial derivatives of T.

(b) Calculate the derivative of G.

(c) Use the chain rule to find the derivative of H at (0,0).

3. Let $f : \mathbf{R}^2 \to \mathbf{R}$ be given by $f(x, y) = x\sin(y)$. (Think of f as a temperature function.)



(a) Calculate the gradient of f at $(1, \pi/4)$, and find the largest rate of change of the temperature f at that point.

(b) What is the rate of change of $f(x, y)$ at $(1, \pi/4)$ in the direction $\vec{v} = [1/\sqrt{2}, 1/\sqrt{2}]$?

(c) Sketch the tangent plane to the graph of f at $(1, \pi/4)$ and give its equation.

2. Given the points A(4,3,2), B(0,3,-1), and C(7,0,0).

   (a) Find equations for the plane passing through A, B, and C.

   (b) Find the area of the triangle $\triangle$ABC.

   (c) What angle does the z-axis make with the plane?.
