

## Quadrilaterals

MA 341 - Topics in Geometry  
Lecture 22

---

---

---

---

---

---

---

---

## Theorems

1. A convex quadrilateral is cyclic if and only if the four perpendicular bisectors of the sides are concurrent.
2. A convex quadrilateral is cyclic if and only if opposite angles are supplementary.

21-Oct-2011

---

---

---

---

---

---

---

## Ptolemy's Theorem

Let  $a$ ,  $b$ ,  $c$ , and  $d$  be the lengths of consecutive sides of a cyclic quadrilateral and let  $x$  and  $y$  be the lengths of the diagonals. Then  $ac + bd = xy$ .

Also,

$$\frac{x}{y} = \frac{ad+bc}{ab+cd}$$

21-Oct-2011

MA 341 001

3

---

---

---

---

---

---

---

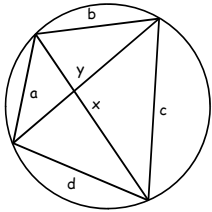

---

### Ptolemy's Theorem

This leads to the following:

$$x = \sqrt{\frac{(ac+bd)(ad+bc)}{ab+cd}}$$

and

$$y = \sqrt{\frac{(ac+bd)(ab+cd)}{ad+bc}}$$

21-Oct-2011 MA 341 001 4

---

---

---

---

---

---

---

---

### Angles of a cyclic quadrilateral

If  $A$  is the angle between  $a$  and  $d$

$$\cos(A) = \frac{a^2 + d^2 - b^2 - c^2}{2(ad+bc)}$$

$$\sin(A) = 2 \frac{\sqrt{(s-a)(s-b)(s-c)(s-d)}}{ad+bc}$$

$$\tan \frac{A}{2} = \sqrt{\frac{(s-a)(s-d)}{(s-b)(s-c)}}$$

21-Oct-2011 MA 341 001 5

---

---

---

---

---

---

---

---

### Angles of a cyclic quadrilateral

The angle,  $\theta$ , between the diagonals

$$\tan \frac{\theta}{2} = \sqrt{\frac{(s-b)(s-d)}{(s-a)(s-c)}}$$

The circumradius is

$$R = \frac{1}{4} \sqrt{\frac{(ab+cd)(ac+bd)(ad+bc)}{(s-a)(s-b)(s-c)(s-d)}}$$

(Parameshvara's formula)

21-Oct-2011 MA 341 001 6

---

---

---

---

---

---

---

---

### Incenters of the triangles

The incenters of 4 triangles form a rectangle

Sides parallel to lines through midarc points

21-Oct-2011 MA 341 001 7

---

---

---

---

---

---

---

---

### Incenters of the triangles

The incenters and excenters of 4 triangles form a 4 x 4 grid

21-Oct-2011 MA 341 001 8

---

---

---

---

---

---

---

---

### Incenters of the triangles

Consider quadrilaterals formed by centroids, 9-point circle centers and orthocenters of the 4 triangles

21-Oct-2011 MA 341 001 9

---

---

---

---

---

---

---

---

### Incenters of the triangles

All are similar to ABCD.

$H_2H_1H_4H_3$  is congruent to ABCD.

21-Oct-2011

MA 341 001

10

---

---

---

---

---

---

---

---

### Tangential Quadrilaterals

A convex quadrilateral whose sides all lie tangent to inscribed circle - the incircle

21-Oct-2011

MA 341 001

11

---

---

---

---

---

---

---

---

### Tangential Quadrilaterals

Is a rectangle a tangential quadrilateral?

Is a square a tangential quadrilateral?

Is a parallelogram a tangential quadrilateral?

21-Oct-2011

MA 341 001

12

---

---

---

---

---

---

---

---

### Tangential Quadrilaterals

Is a rhombus a tangential quadrilateral?

Is a kite a tangential quadrilateral?

21-Oct-2011 MA 341 001 13

---

---

---

---

---

---

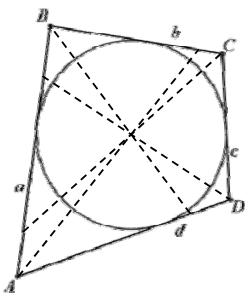

---

---

### Tangential Quadrilaterals

In triangle incenter = intersection of angle bisectors

What about quadrilaterals?

21-Oct-2011 MA 341 001 14

---

---

---

---

---

---

---

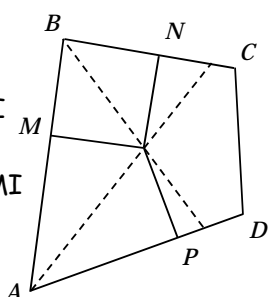

---

### Tangential Quadrilaterals

I is equidistant from AD, AB and BC

$\triangle API \cong \triangle AMI \Rightarrow PI \cong MI$

$\triangle MIB \cong \triangle NIB \Rightarrow NI \cong MI$

21-Oct-2011 MA 341 001 15

---

---

---

---

---

---

---

---

### Tangential Quadrilaterals

I is equidistant from AD,  
AB, BC and CD

$\triangle API \cong \triangle AMI \Rightarrow PI \cong MI$

$\triangle MIB \cong \triangle NIB \Rightarrow NI \cong MI$   
etc

Thus, there is an inscribed circle!

21-Oct-2011 MA 341 001 16

---

---

---

---

---

---

---

---

### Tangential Quadrilaterals

If there is an inscribed circle, then center is equidistant from sides.

21-Oct-2011 MA 341 001 17

---

---

---

---

---

---

---

---

### Tangential Quadrilaterals

Then, BI, CI, DI, and AI are angle bisectors.

21-Oct-2011 MA 341 001 18

---

---

---

---

---

---

---

---

### Theorem

A quadrilateral is tangential if and only if

$$a + c = b + d.$$

21-Oct-2011

MA 341 001

19

---

---

---

---

---

---

---

---

### Proof

$$BM = BN$$

$$CN = CO$$

$$DO = DP$$

$$AP = AM$$

$$a + c = AM + MB + CO + OD$$

$$= AP + BN + CN + DP$$

$$= b + d$$

21-Oct-2011

MA 341 001

20

---

---

---

---

---

---

---

---

### Proof

Assume  $a + c = b + d$ .

Construct circle tangent to AB, AD, CD.

Construct  $CB'$  tangent to circle

WLOG  $AB' < AB$

21-Oct-2011

MA 341 001

21

---

---

---

---

---

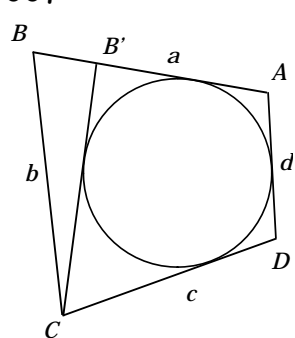

---

---

---

### Proof

$AB'CD$  tangential  $\Rightarrow$   
 $AB' + c = d + B'C$   
 $a + c = d + b$   
 Subtraction  
 $a - AB' = b - B'C$   
 $BB' + B'C = b$   
 $\Rightarrow B = B'$   
 $\Rightarrow ABCD$  tangential

21-Oct-2011 MA 341 001 22

---

---

---

---

---

---

---

---

### Result

If  $ABCD$  tangential quadrilateral then

$$a + c = b + d = \frac{a + b + c + d}{2} = s$$

21-Oct-2011 MA 341 001 23

---

---

---

---

---

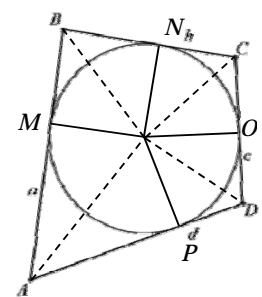

---

---

---

### Area

For inradius  $r$  and semiperimeter  $s$

$$K = rs$$

21-Oct-2011 MA 341 001 24

---

---

---

---

---

---

---

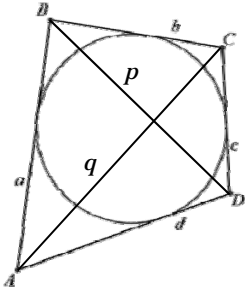

---

### Area

Trigonometric formula

$$K = rs$$

$$K = \sqrt{abcd} \sin\left(\frac{B+D}{2}\right)$$

$$K = \frac{1}{2} \sqrt{p^2 q^2 - (ac - bd)^2}$$

21-Oct-2011 MA 341 001 25

---

---

---

---

---

---

---

---

### Further Results

1. If a line cuts a tangential quadrilateral into two polygons with equal areas and equal perimeters, the line passes through the incenter
2. If M and N are midpoints of diagonals and incenter = I, then M, I, and N are collinear

21-Oct-2011 MA 341 001 26

---

---

---

---

---

---

---

---

### Further Results

3. If incircle is tangent to AB, BC, CD, DA at X, Y, Z, W respectively, then lines XY, WZ and AC are concurrent
4. If I is incenter then
 
$$IA \cdot IC + IB \cdot ID = \sqrt{AB \cdot BC \cdot CD \cdot DA}$$
5. Incenter I of ABCD coincides with centroid of ABCD if and only if
 
$$IA \cdot IC = IB \cdot ID$$

21-Oct-2011 MA 341 001 27

---

---

---

---

---

---

---

---

### Further Results

Look at the incircles of the triangles of a tangential quadrilateral.

21-Oct-2011                      MA 341 001                      28

---

---

---

---

---

---

---

---

### Further Results
