

Exam #2 Preparation

Exam #2 will be in class on Thursday, April 16. You should be familiar with (1) how to solve all the problems we discussed in class (February 24 through April 9, excluding Problems V) and for Homework #5, #6, and #7 — you need to know both *what* the answers are, and *why*; and (2) how these and other problems can be solved using such strategies as described in Chapters 4–9 and Chapter 14 of the book. You should also read “Class Notes” to be sure that you are aware of everything we have done in class so far, and “Notebook Checklist” to be sure your notebooks are up to date. You may use a calculator on the exam (but not one built in to a cell phone).
