

## Exam #2 Review

1. Be sure you know how to do the problems in homework assignments 5, 6 and 7—see my solution sheets for the last two assignments.
2. Know how to prove Euler's Formula—I presented this in class. There is an alternative proof in the book.
3. Read Chapter 3 and study those parts that are related to what we have done in class. You may see different explanations of some of the things we have done.
