

**MA 601**  
**Homework #2**  
Due Monday, September 21

Next time we will discuss some technology.

1. Install GeoGebra on your personal computer. But it can also be run online. See <http://www.geogebra.org/cms>. Experiment with it a little. If you can, bring a laptop to class.
2. Ask someone to show you how to run T<sub>E</sub>X on your work computer, and get suggestions for what version you might want to install on your personal computer.
3. Look over my sample L<sup>A</sup>T<sub>E</sub>X files here: <http://www.ms.uky.edu/~lee/latex/latex.html>.
4. Reach chapter 10 in the text.
5. Continue to browse some of the blogs—see the links on the course website. Make a note of something interesting that you read that you can mention in class.
