UK Undergraduate MATH CLUB

James Wells will speak about

"R.L. Moore and the Moore method"

The Moore method is a way of teaching mathematics by having the students develop the subject under the guidance of an instructor, rather than having the subject developed for them by the instructor. The Moore method is named after R.L. Moore of the University of Texas at Austin. Don Buckholtz, Tom Hayden and Jim Wells of the UK Department of Mathematics have taken courses from Professor Moore when they studied in Texas.

In this math club meeting, Professor Wells will tell a little bit about how this method works and show a videotape of Professor Moore demonstrating his method.

As always, we will have pizza and time for informal conversation with mathematics students and faculty.

4 pm, Monday, 9 October 2000 Commons room, POT 743

Pizza and math!
