*All students
with an interest in Mathematics
are welcome to attend!!*

Date: Thursday, February 17, 2011

Time: 4:00pm - 5:00pm

Room: 208, Classroom Building

Abstract:

Want to be an actuary? Want to learn what an actuary does?
Want to use math in a cool way as a career?

Our presenter will be **Chris Cunliffe**. He has a bachelor and a master's degree in mathematics from UK. He is an actuary and helps people get more out of their data through quantitative analysis and modeling. He created his own company, **Bobo Strategy**, in an attempt to bring the quantitative skills readily available to large-scale financial institutions to small businesses in a way that is both useful and affordable. Lately he spends most of his time helping owners of places like coffee shops, dance studios, restaurants, and veterinarian offices make the most of their data. And the occasional mayor. Previously, he spent seven years doing this for executives at insurance companies and banks. His presentation promises to be enlightening and fun and there will be time for questions.

Anyone interested is welcome to join.
