

UNIVERSITY OF KENTUCKY

Math Movie of the Month
presents:

**Infinite secrets:
The genius of Archimedes**

**A NOVA documentary
about a book
lost for
eight centuries**

“In October 1998, a battered manuscript of parchment leaves sold for two million dollars to an anonymous bidder at auction. The thousand year-old manuscript contains the earliest surviving writings by Archimedes, a Greek thinker who is regarded as the greatest mathematician of antiquity. The story of the 174-page volume’s journey from its creation in Constantinople to the auction block at Christie’s in New York is described in this film.”
– 60 min

**Friday October 9th, 2009
7:30pm in Classroom Building 118**
