

UNIVERSITY OF KENTUCKY

Math Movie of the Month

presents:

Fermat's

Last

Tango

**A musical
about settling
a 300 year old
math problem**

“Fermat’s Last Tango was inspired by the achievements of Princeton University Mathematics Professor Andrew Wiles, who in June 1993 presented a proof to the theorem conjectured by French mathematician Pierre de Fermat in 1637. ‘Fermat’s Last Tango’ is a musical fantasia based on the true encounter between mathematician Andrew Wiles and Fermat’s last theorem. The music composed by Joshua Rosenblum, the book by his wife Joanne Lessner, and the clever lyrics by the pair provide extraordinary entertainment. The play makes a clear statement about the enduring importance of mathematics and its intellectual impact over the millennia.” – 100 min.

Friday April 19th, 2010

7:30pm in Classroom Building 118
