

Math 213 - Applications of Double Integrals

Peter A. Perry

University of Kentucky

October 26, 2018

Homework

- Re-read section 15.4
- Begin work on problems 1-23 (odd) from 15.4
- Read section 15.5 for Monday, October 29
- Finish up Webwork C1

Unit III: Multiple Integrals

- Lecture 24 Double Integrals over Rectangles
- Lecture 25 Double Integrals over General Regions
- Lecture 26 Double Integrals in Polar Coordinates
- Lecture 27 **Applications of Double Integrals**
- Lecture 28 Surface Area

- Lecture 29 Triple Integrals
- Lecture 30 Triple Integrals in Cylindrical Coordinates
- Lecture 31 Triple Integrals in Spherical Coordinates
- Lecture 32 Change of Variable in Multiple Integrals, Part I
- Lecture 33 Change of Variable in Multiple Integrals, Part II
- Lecture 34 Exam III Review

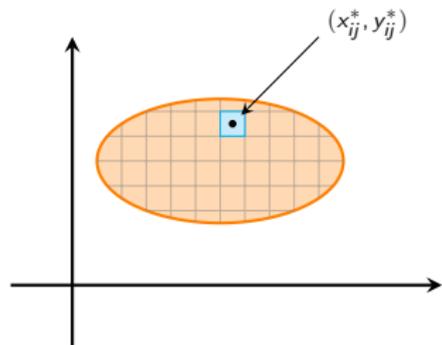

Goals of the Day

- Compute Mass of a Lamina from Mass Density
- Compute Moments and Centers of Mass
- Compute Moments of Inertia

Density to Mass

The *density* of a plane solid (lamina) D is the mass per unit area:

$$\rho(x, y) = \lim_{\Delta A \rightarrow 0} \frac{\Delta m}{\Delta A}.$$

The total mass is approximately

$$M \simeq \sum_{i,j=1}^n \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

where (i, j) index rectangles in D of area ΔA

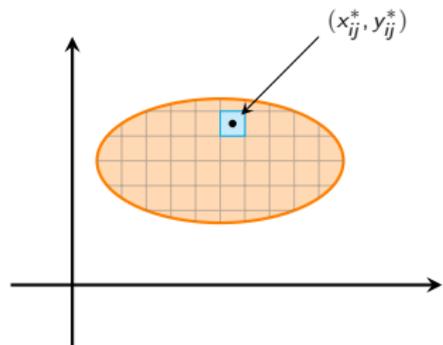

The total mass is *exactly*

$$M = \iint_D \rho(x, y) dA$$

Charge Density to Charge

The *charge density* of a plane conductor D is the mass per unit area:

$$\rho(x, y) = \lim_{\Delta A \rightarrow 0} \frac{\Delta Q}{\Delta A}.$$

The total mass is approximately

$$Q \simeq \sum_{i,j=1}^n \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

where (i, j) index rectangles in D of area ΔA

The total mass is *exactly*

$$Q = \iint_D \rho(x, y) dA$$

Density to Mass

Electric charge is distributed over the disc $x^2 + y^2 \leq 1$ m with charge density

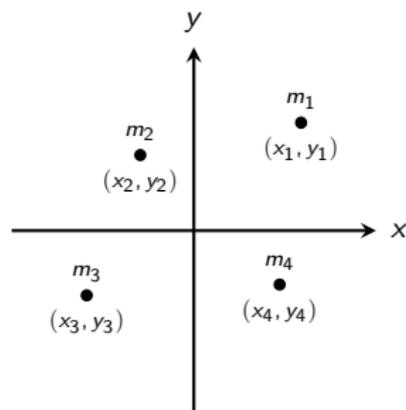

$$\sigma(x, y) = \sqrt{x^2 + y^2}$$

coulombs per square meter. Find the total charge Q on the disc.

Moments, Centers of Mass - Discrete Systems

For a set of point masses m_i at (x_i, y_i) :

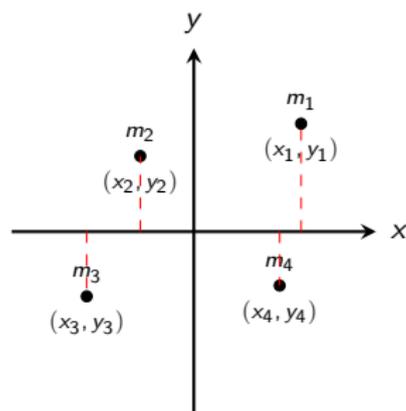

- The total mass is $M = \sum_{i=1}^n m_i$

Moments, Centers of Mass - Discrete Systems

For a set of point masses m_i at (x_i, y_i) :

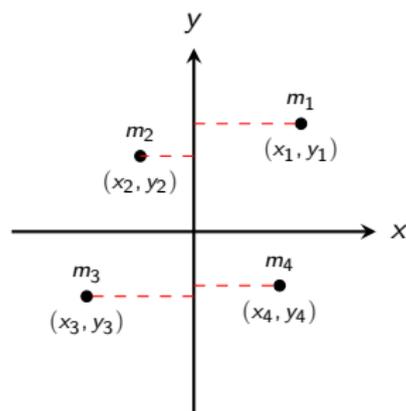

- The total mass is $M = \sum_{i=1}^n m_i$
- The moment with respect to the x-axis is $M_x = \sum_{i=1}^n y_i m_i$

Moments, Centers of Mass - Discrete Systems

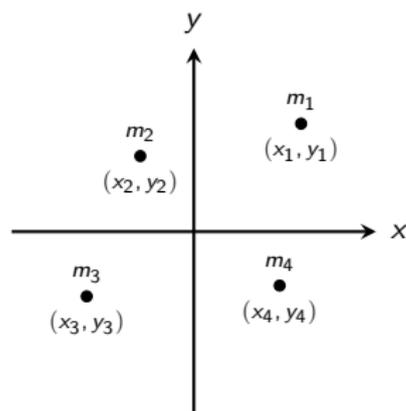

For a set of point masses m_i at (x_i, y_i) :

- The total mass is $M = \sum_{i=1}^n m_i$
- The moment with respect to the x -axis is $M_x = \sum_{i=1}^n y_i m_i$
- The moment with respect to the y -axis is $M_y = \sum_{i=1}^n x_i m_i$

Moments, Centers of Mass - Discrete Systems

For a set of point masses m_i at (x_i, y_i) :

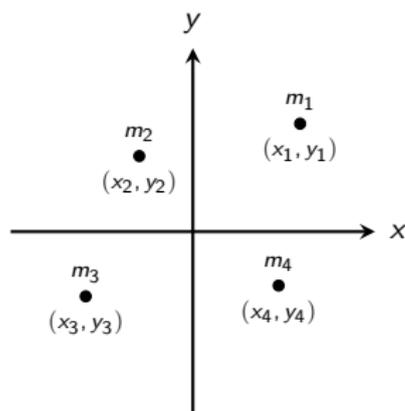

- The total mass is $M = \sum_{i=1}^n m_i$
- The moment with respect to the x -axis is $M_x = \sum_{i=1}^n y_i m_i$
- The moment with respect to the y -axis is $M_y = \sum_{i=1}^n x_i m_i$
- The center of mass is

$$(\bar{x}, \bar{y}) = \left(\frac{M_y}{M}, \frac{M_x}{M} \right)$$

Moments, Centers of Mass - Discrete Systems

For a set of point masses m_i at (x_i, y_i) :

- The total mass is $M = \sum_{i=1}^n m_i$
- The moment with respect to the x -axis is $M_x = \sum_{i=1}^n y_i m_i$
- The moment with respect to the y -axis is $M_y = \sum_{i=1}^n x_i m_i$
- The center of mass is

$$(\bar{x}, \bar{y}) = \left(\frac{M_y}{M}, \frac{M_x}{M} \right)$$

$$(\bar{x}, \bar{y}) = \left(\frac{\sum_{i=1}^n x_i m_i}{\sum_{i=1}^n m_i}, \frac{\sum_{i=1}^n y_i m_i}{\sum_{i=1}^n m_i} \right)$$

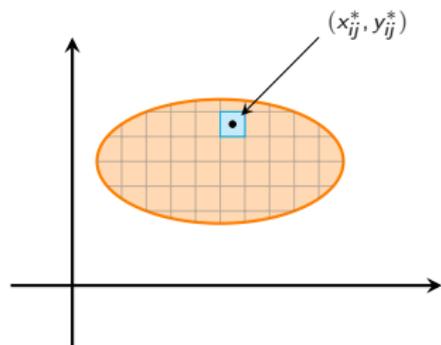

Moments, Centers of Mass - Continuous Systems

If a lamina D has density $\rho(x, y)$:

$$M \simeq \sum_{ij} \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_x \simeq \sum_{ij} y_{ij}^* \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_y \simeq \sum_{ij} x_{ij}^* \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

Taking limits...

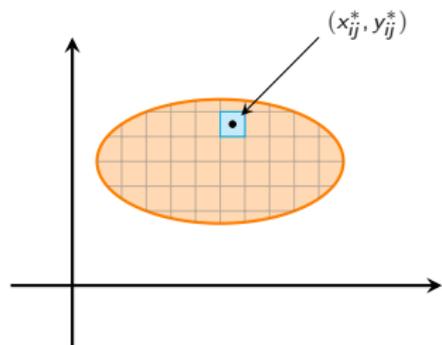

Moments, Centers of Mass - Continuous Systems

If a lamina D has density $\rho(x, y)$:

$$M \simeq \sum_{ij} \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_x \simeq \sum_{ij} y_{ij}^* \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_y \simeq \sum_{ij} x_{ij}^* \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

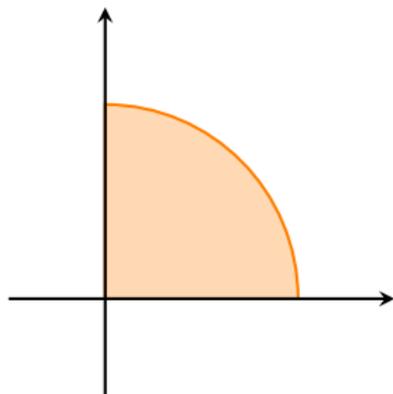

Taking limits...

$$M = \iint_D \rho(x, y) dA$$

$$M_x = \iint_D y \rho(x, y) dA$$

$$M_y = \iint_D x \rho(x, y) dA$$

Center of Mass

$$M \simeq \sum_{ij} \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_x \simeq \sum_{ij} y_{ij}^* \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_y \simeq \sum_{ij} x_{ij}^* \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

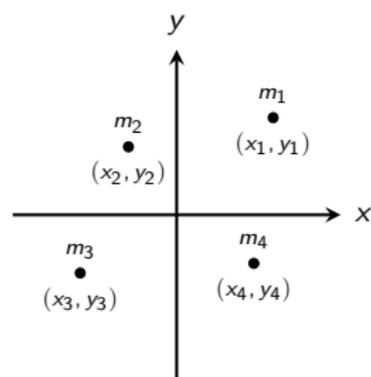

A lamina occupies the region

$$D = \{(x, y) : x^2 + y^2 \leq 1, x \geq 0, y \geq 0\}.$$

Find its center of mass if the density at each point is proportional to its distance from the x -axis.

Moment of Inertia - Discrete Systems

For a set of point masses m_i at (x_i, y_i) :

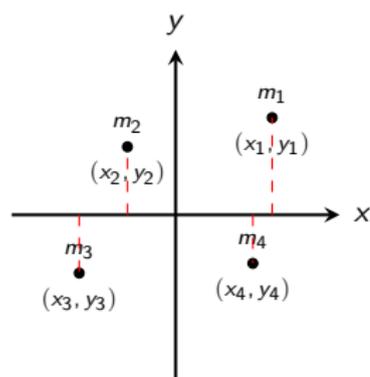

Moment of Inertia - Discrete Systems

For a set of point masses m_i at (x_i, y_i) :

- The *moment of inertia about the x-axis* is

$$I_x = \sum_{i=1}^n m_i y_i^2$$

Moment of Inertia - Discrete Systems

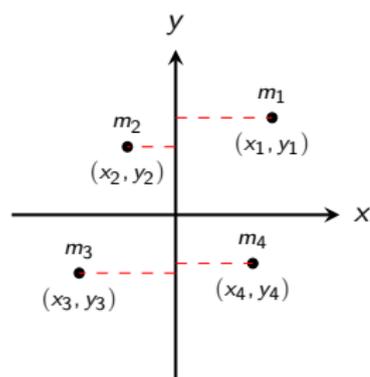

For a set of point masses m_i at (x_i, y_i) :

- The *moment of inertia about the x-axis* is

$$I_x = \sum_{i=1}^n m_i y_i^2$$

- The *moment of inertia about the y-axis* is

$$I_y = \sum_{i=1}^n m_i x_i^2$$

Moment of Inertia - Discrete Systems

For a set of point masses m_i at (x_i, y_i) :

- The *moment of inertia about the x-axis* is

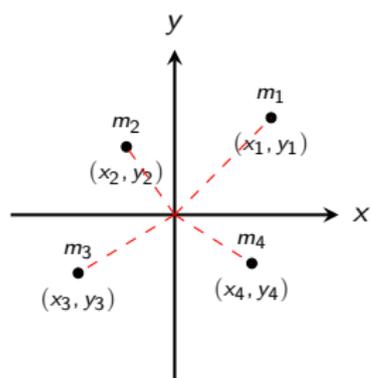

$$I_x = \sum_{i=1}^n m_i y_i^2$$

- The *moment of inertia about the y-axis* is

$$I_y = \sum_{i=1}^n m_i x_i^2$$

- The *moment of inertia about the origin* is

$$I_0 = \sum_{i=1}^n m_i (x_i^2 + y_i^2)$$

Moment of Inertia - Continuous Systems

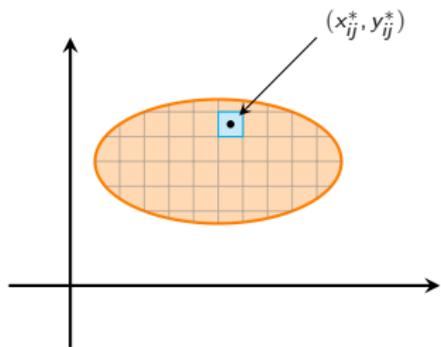

If a lamina D has density $\rho(x, y)$:

$$I_x \simeq \sum_{ij} (y_{ij}^*)^2 \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$I_y \simeq \sum_{ij} (x_{ij}^*)^2 \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_y \simeq \sum_{ij} \left((x_{ij}^*)^2 + (y_{ij}^*)^2 \right) \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

Taking limits...

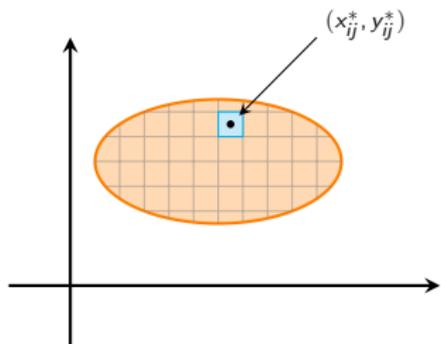

Moment of Inertia - Continuous Systems

If a lamina D has density $\rho(x, y)$:

$$I_x \simeq \sum_{ij} (y_{ij}^*)^2 \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$I_y \simeq \sum_{ij} (x_{ij}^*)^2 \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

$$M_y \simeq \sum_{ij} \left((x_{ij}^*)^2 + (y_{ij}^*)^2 \right) \rho(x_{ij}^*, y_{ij}^*) \Delta A$$

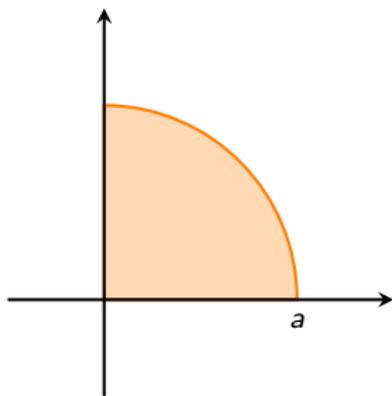

Taking limits...

$$I_x = \iint_D y^2 \rho(x, y) dA$$

$$I_y = \iint_D x^2 \rho(x, y) dA$$

$$I_0 = \iint_D (x^2 + y^2) \rho(x, y) dA$$

Moments of Inertia

$$I_x = \iint_D y^2 \rho(x, y) dA$$

$$I_y = \iint_D x^2 \rho(x, y) dA$$

$$I_0 = \iint_D (x^2 + y^2) \rho(x, y) dA$$

Find the moments of inertia I_x , I_y , and I_0 for the part of the disc of radius a in the first quadrant, assuming that the density is constant.
